Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.

Levels of Convincing

Inspired by *Connecting Mathematical Ideas* by Jo Boaler and Cathy Humphreys

bun + produce + meat + cheese + meat + cheese = \$2.65

bun + produce + meat + cheese = \$1.75

meat + cheese = \$0.90

The Reality

- Students needed guidance to figure out a layer's cost
- Not every class is ready to go straight to 100x100
- Common wrong answers included:
 - \$175.00 ($\1.75×100 cheeseburgers)
 - \$132.50 ($\2.65×50 Double-Doubles)
- Students had equations that had more than X patties
- Students were surprised to see three different equations:
 - Starting with a Double-Double
 - Starting with a cheeseburger
 - Starting with produce and bun only

STUDENT WORK

What problem are you trying to figure out?	
<p>How much does a 100x100 burger cost?</p> <p style="text-align: right;">Regular (one patty) \$1.25</p> <p style="text-align: center;">\$132.50</p>	
What do you already know from the problem?	What do you need to know to solve the problem?
<ul style="list-style-type: none"> • there's 100 beef patties • costs 2.50 	<ul style="list-style-type: none"> • How much does a regular cheeseburger cost. 25.1 - <p style="text-align: center;">OP.</p> <p style="text-align: center;">OP. OP.</p>
What is your conclusion?	
<p>To get the answer, I first figured out what the price of a regular & double-double cheeseburgers are. From there I subtracted the price of the produce & buns, then multiplied by 100. That gave me the answer, which I once again had to add the price of the buns & produce.</p> <p style="text-align: center;"> $22.8 + 00.1 - xOP_0 = P$ $128.0 + xOP_0 = P$ </p>	

What is your conclusion?

The only difference between a double double and a cheeseburger is one patty and one slice of cheese. So you subtract the prices of the two to find the price of only one patty & cheese. You then use that number (.90) & subtract it from the cost of one whole cheeseburger to find the price of all the extra stuff. Multiply by 100

What is your conclusion?

A 100x100 at In-n-Out cost \$90.85. To solve that, you start by subtracting the price of a cheeseburger from a double double. The answer (.90) is the price of a patty and cheese slice. You multiply (.90) by one less patty than what you want. (x-1), and you add the price of a cheeseburger (1.75). You end up with the eq. $[y = .90(x-1) + 1.75]$. For the 100x100, you plug in 100 to the (x) and you end up with \$90.85.

$$\left[\begin{array}{l} y = .90(100-1) + 1.75 \\ y = 89.10 + 1.75 \\ y = 90.85 \end{array} \right]$$

What is your conclusion?

Figure the price difference from the Double-Double with a cheeseburger.
Then find out the price for the produce and cheese-beef.

get total into \$90.85

How To Fix a Giant Sinkhole

The cement method vs. the graded-filter technique.

18

0

By Brian Palmer

A sinkhole in Guatamala

It's not clear whether cement is the best option, however. A 6,500-cubic-foot wad of concrete may serve to concentrate water runoff in other areas, leading to more sinkholes. Many engineers prefer the **graded-filter technique**, in which the hole is filled with a layer of boulders, then a layer of smaller rocks, and, finally, a layer of gravel. This fills the hole, more or less, while permitting water to drain through the area.

2010 Guatemalan Sinkhole

Kaplinsky, Robert

To:

Wednesday, February 06, 2013 1:39 PM

Hi Brian,

I am using your "How to Fix a Giant Sinkhole" article for a math lesson on volume of a cylinder. I have one question for you. You mentioned.

"It's not clear whether cement is the best option, however. A 6,500-cubic-foot wad of concrete may serve to concentrate water runoff in other areas, leading to more sinkholes."

Can you please tell me where you got 6500 cubic feet from? Did you do 65×100 ? We get something closer to 342,000 cubic feet.

Thanks,
Robert

h

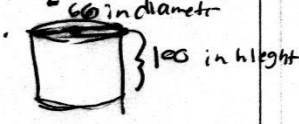

πr^2

The Reality

- Some students felt anxious about not having enough information to take a guess.
- However, guessing helped students determine what they knew and needed to know.
- Students modeled the problem differently:
 - Cylinder
 - Semi-sphere
 - Truncated cone
- Students didn't know what units to use.

STUDENT WORK

What problem are you trying to figure out?	
<p>What is the volume of the sink hole</p> 	
What do you already know from the problem?	What do you need to know to solve the problem?
<ul style="list-style-type: none"> - It needs to be filled with materials such as rocks, cement and dirt. - Circular shape (cylinder) 	<ul style="list-style-type: none"> - How deep is it? - How wide? - How much materials are used to fill the hole?
What is your conclusion?	
<p>First In order to gain a general idea of my ^{question} question measurements, I drew an image to represent my given measurements.</p>  <p>Then I used the equation formula to find the volume of a cylinder, which was $\pi r^2 \cdot h$. I use this equation because I needed to find how much cement was need to fill the hole.</p> <p>My equation look like this $\pi 33^2 \cdot 100$. ^{radius} ^{height} Then I plged it into my calculator and I got $342,11973$.</p>	

How Do We Assess Student Work?

- Option #1 – Don't assess the problem
- Option #2 – Use general purpose rubric
- Option #3 – Use a problem-specific rubric

Option #2 - General Purpose Rubric

- One point for student reaching the correct conclusion.
- One point for student providing sufficient reasoning to support this conclusion.

What is your conclusion?

In order to solve this problem, you need the width and the height of the hole. Once you have it you plug them into the equation $r^2 \pi \cdot h$ which is to find the volume. Once you find the volume you will know how much ~~concrete~~ cement you will need to order so that you could fill that ~~to~~ hole, which in this case would be 342,119 feet of ~~concrete~~ cement.

What is your conclusion?

This particular sinkhole in Guatemala City, was about 20 meters (66 feet) in diameter and about 30 meters (100 feet) deep. We are trying to find the volume of the hole to figure out how much material is needed to fill it. I used the cylinder volume formula ($V = \pi r^2 h$). When you plug in the radius and the height, you get $V = \pi (33)^2 (100)$. I did not use 66 as my radius, because that is my diameter. Radius is half of the diameter. After you solve, you are left with 342,119.44 ft^3 . You don't use ft^2 or ft because the hole is 3 dimensional. From here on, you just use the material cost and amount to find the price of the job.

What is your conclusion?

In order to fill the sinkhole with cement. They will need 342,119 ft³ of cement. How is this possible?

Diameter = 66 feet, but we are looking for radius.

$66/2 = 33$ Now we got our radius which is 33.

$$r = 33$$

Depth = 100 feet.

So we have a radius and height. we can use the volume of a cylinder formula. which is $V = \pi r^2 h$

$$V = \pi (33)^2 \cdot 100$$

$$V = \pi (1089) \cdot 100$$

$$V = 3421.20$$

$$V = 342119.44$$

Option #3 - Problem-Specific Rubric

Requirement	Possible Points	Points Earned
Student finds the correct answer based on the dimensions used.	3	
Student uses the correct units (i.e., cubic feet/meters for volume and feet/meters for length)	1	
Student correctly uses half the diameter for the radius and explains why.	2	
Student creates a narrative using sentences to explain his or her reasoning.	2	

Correct answer	___ / 3	Explains $\frac{d}{2} = r$	___ / 2
Correct units	___ / 1	Narrative w/ sentences	___ / 2

What is your conclusion?

In order to solve this problem, you need the width and the height of the hole. Once you have it you plug them into the equation $r^2 \pi \cdot h$ which is to find the volume. Once you find the volume you will know how much ~~the~~ cement you will need to order so that you could fill that ~~to~~ hole, which in this case would be 342,119 feet of ~~the~~ cement.

Correct answer	___ / 3	Explains $\frac{d}{2} = r$	___ / 2
Correct units	___ / 1	Narrative w/ sentences	___ / 2

What is your conclusion?

This particular sinkhole in Guatemala City, was about 20 meters (66 feet) in diameter and about 30 meters (100 feet) deep. We are trying to find the volume of the hole to figure out how much material is needed to fill it. I used the cylinder volume formula ($V = \pi r^2 h$). When you plug in the radius and the height, you get $V = \pi (33)^2 (100)$. I did not use 66 as my radius, because that is my diameter. Radius is half of the diameter. After you solve, you are left with 342,119.44 ft³. You don't use ft² or ft because the hole is 3 dimensional. From here on, you just use the material cost and amount to find the price of the job.

Correct answer	___ / 3	Explains $\frac{d}{2} = r$	___ / 2
Correct units	___ / 1	Narrative w/ sentences	___ / 2

What is your conclusion?

In order to fill the sinkhole with cement. They will need 342,119 ft³ of cement. How is this possible?

Diameter = 66 feet, but we are looking for radius.

$66/2 = \boxed{33}$ Now we got our radius which is 33.

$r = 33$

Depth = 100 feet.

So we have a radius and height. we can use the volume of a cylinder formula. which is $V = \pi r^2 h$

$$V = \pi(33)^2 \cdot 100$$

$$V = \pi(1089) \cdot 100$$

$$V = 3421.20$$

$$\boxed{V = 342119.44}$$

Complicated
or Complex?

Cookie Monster Cupcakes

Nailed it

method

1. Using an electric mixer, whip the butter until it is pale. This will take at least 5 minutes on high.
2. Gradually add in the icing mixture and vanilla until well combined.
3. With the mixer running, add in food colouring until you get to the Cookie Monster colour. This may be a lot if you are using liquid food colouring or a little if using gel food colouring.
4. Add in the milk and mix until the frosting puffs up.
5. Fill a piping bag with a fluted nozzle and pipe on icing.
6. With the writing icing, place black spots on the marshmallows for pupils.
7. Place on each cupcake.
8. Cut cookies in half and place in 'mouth'.

Questioning Scenarios

- The activity begins with teachers in groups of three taking the roles of teacher, student, or observer.
- The individuals playing the role of teacher and student each receive a slip of paper describing their scenario.
- The individual playing the role of observer waits to record all of the teacher's questions to the student.
- Once the activity begins, the teacher will talk to the student in the context of the scenario they read about on the slips of paper.

What did you get for the area of the circle with a radius of 2 units?

4 pi

Great. Do you have any questions?

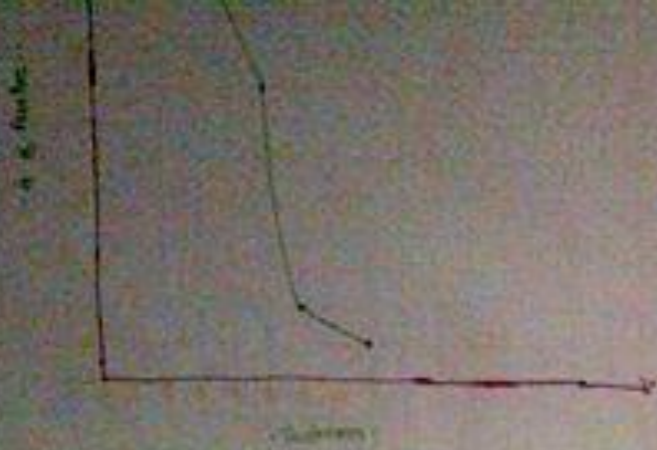

No

What did you get for the area of the circle with a radius of 2 units?

4 pi

Great. How did you get your answer?

The radius is 2 so I plugged it into $2\pi r$ and got 4 pi.

Defining the Problem

- ▶ Students appear to demonstrate “deep, authentic command of mathematical concepts” when given commonly used problems.
- ▶ However with more challenging problems, the same students seem to no longer demonstrate that command.

Addressing the Problem

- ▶ First, we must have a clear understanding about why these problems are different from one another.
- ▶ Next, we need to practice using these problems so that we understand how students may react to them.
- ▶ Last, we need a source that can provide us with a variety of free problems.

DOK 1 Example	Find the sum. $44 + 27 =$	If you have 2 dimes and 3 pennies, how many cents do you have	Which point is located at $\frac{7}{12}$ below? 	Find the perimeter of a rectangle that measures 4 units by 8 units.	Find the difference. $5\frac{1}{2} - 4\frac{2}{3} =$
DOK 2 Example	Fill in the boxes below using the whole numbers 1 through 9, no more than one time each, so that you make a true equation. $\square\square + 53 = \square\square$	Make 47¢ in three different ways with either quarters, dimes, nickels, or pennies.	Label the point where $\frac{3}{4}$ belongs on the number line below. Be as precise as possible. 	List the measurements of three different rectangles that each has a perimeter of 20 units.	Create three different mixed numbers that will make the equation true by using the whole numbers 1 through 9, no more than one time each. You may reuse the same whole numbers for each of the three mixed numbers. $5\frac{4}{5} - \square\square = 3\frac{1}{20}$
DOK 3 Example	Make the largest sum by filling in the boxes below using the whole numbers 1 through 9, no more than one time each. $\square\square + \square\square =$	Make 47¢ using exactly 6 coins with either quarters, dimes, nickels, or pennies.	Create 5 fractions using the whole numbers 0 through 9, exactly one time each as numerators and denominators, and place them all on a number line.	What is the greatest area you can make with a rectangle that has a perimeter of 24 units?	Make the smallest difference by filling in the boxes below using the whole numbers 1 through 9, no more than one time each. 

Topic	Surface Area and Volume	Probability	Transformations	Factoring Quadratics	Quadratics in Vertex Form
CCSS Standard(s)	<ul style="list-style-type: none"> 6.G.4 7.G.6 	<ul style="list-style-type: none"> 7.SP.5 7.SP.7 	<ul style="list-style-type: none"> 8.G.1 G-CO.5 	<ul style="list-style-type: none"> A-SSE.3a 	<ul style="list-style-type: none"> F-IF.7a
DOK 1 Example	Find the surface area of a rectangular prism that measures 3 units by 4 units by 5 units.	What is the probability of rolling a sum of 5 using two 6-sided dice?	Rotate the image below 90° counterclockwise about point D and reflect it across a horizontal line. 	Find the factors: $2x^2 + 7x + 3$	Find the roots and maximum of the quadratic equation below. $y = -3(x - 4)^2 - 3$
DOK 2 Example	List the measurements of three different rectangular prisms that each have a surface area of 20 square units.	What value(s) have a 1/12 probability of being rolled as the sum of two 6-sided dice?	List three sequences of transformations that take pre-image ABCD to image A'B'C'D'. 	Fill in the blank with integers so that the quadratic expression is factorable. $x^2 + __x + 4$	Create three equations for quadratics in vertex form that have roots at 3 and 5 but have different maximum and/or minimum values.
DOK 3 Example	What is the greatest volume you can make with a rectangular prism that has a surface area of 20 square units?	Fill in the blanks to complete this sentence using the whole numbers 1 through 9, no more than one time each. Rolling a sum of $__$ on two $__$ -sided dice is the same probability as rolling a sum of $__$ on two $__$ -sided dice.	What is the fewest number of transformations needed to take pre-image ABCD to image A'B'C'D'? 	Fill the blank by finding the largest and smallest integers that will make the quadratic expression factorable. $2x^2 + 3x + __$	Create a quadratic equation with the largest maximum value using the whole numbers 1 through 9, no more than one time each. $y = -\square(x - \square)^2 + \square$

DOK Flowchart for Questions

DOK Posters

DOK 1

Routine Thinking

- Can you recall ___?
- Can you identify ___?
- How would you describe ___?
- What might you include on a list about ___?
- Can you select ___?
- How can you find the meaning of ___?

arrange calculate memorize
measure name recognize
recall repeat identify
illustrate match label
state list state

DOK 2

Conceptual Thinking

- Can you explain how ___ affected ___?
- How would you apply what you learned to develop ___?
- How would you summarize ___?
- What do you notice about ___?
- How would you estimate ___?
- How could you organize ___?

compare classify categorize
measure graph distinguish
predict modify construct
organize infer summarize
interpret make observations

DOK 3

Strategic Reasoning

- How is ___ related to ___?
- What conclusions can be drawn?
- Can you elaborate on ___?
- How would you test ___?
- What evidence supports ___?
- What would happen if ___?
- Why is that the best answer?

assess compare construct
apprise revise hypothesize
critique investigate
draw conclusions
develop a logical argument

DOK 4

Extended Reasoning

- Write a research paper.
- What information can you gather to support your idea about ___?
- Write a thesis, drawing conclusions from multiple sources.
- Apply information from one text to another to develop an persuasive argument.

design connect prove
analyze critique synthesize
create apply concepts

DOK Level Differences

▶ **Level 1: Recall & Reproduction**

- ▶ Often a trivial application of facts.
- ▶ Generally requires little to no cognitive effort beyond remembering the right formula.
- ▶ Usually only one answer.

▶ **Level 2: Skills & Concepts**

- ▶ Usually requires more than one step to solve.
- ▶ Often multiple answers.

▶ **Level 3: Strategic Thinking**

- ▶ Usually requires critical thinking about the best way to approach a problem.
- ▶ May be multiple answers or a single optimal answer.
- ▶ Often challenging enough to make your head hurt.

▶ **Level 4: Extended Thinking**

- ▶ In mathematics these are generally represented by performance tasks or problem-based lessons.

Adding Decimals

Use the numbers 1 through 9, exactly one time each, to fill in the boxes and make three decimals whose sum is as close to 1 as possible.

$$\begin{array}{r} 0.\square\square\square \\ 0.\square\square\square \\ + 0.\square\square\square \\ \hline \end{array}$$

First attempt:

Points: ___/2 attempt ___/2 explanation

area:
48

What did you learn from this attempt? How will your strategy change on your next attempt?

~~This attempt doesn't equal 24.~~

Second attempt:

Points: ___/2 attempt ___/2 explanation

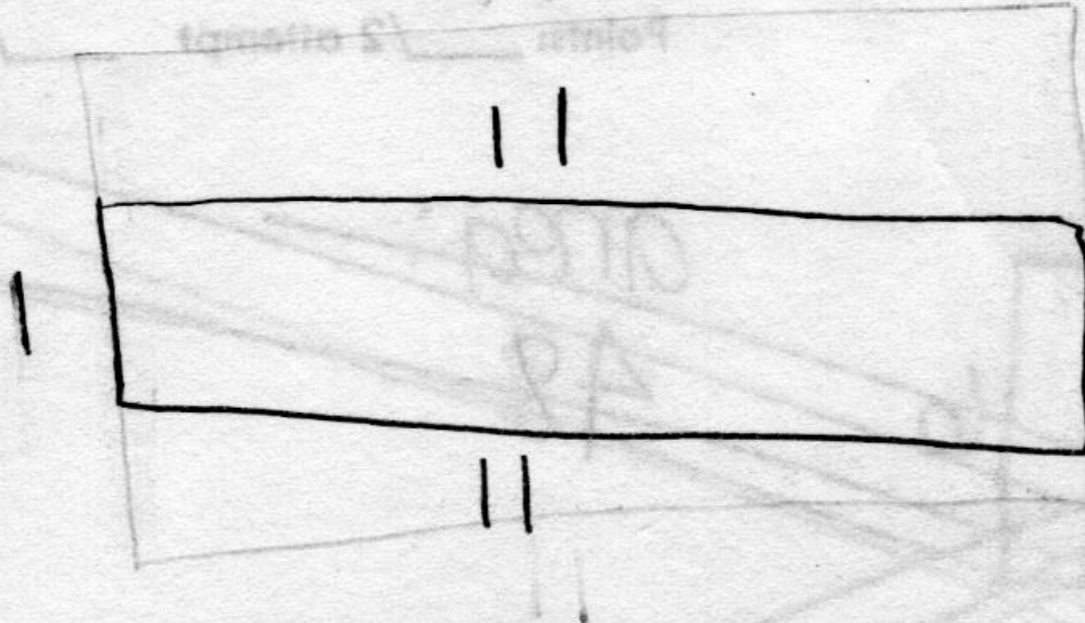

area:
32

What did you learn from this attempt? How will your strategy change on your next attempt?

The perimeter was 24, and the area was 32
but I think there's a blaster #

Fourth attempt:

Points: ___/2 attempt ___/2 explanation

What did you learn from this attempt? How will your strategy change on your next attempt?

The perimeter is 24, but the area is 11 and attempt #2 the area is 32
Strategy: Use #'s with more than one row.

Fifth attempt:

Points: ___/2 attempt ___/2 explanation

area:
35

What did you learn from this attempt? How will your strategy change on your next attempt?

DOK

FAQ

- *When will students ever use this?*
- *What DOK level should I start students off with?*
- *How do teachers fit these problems into their pacing?*
- *How do I help prevent students from giving up after trying the problem once or twice?*
- *Where can I find other DOK 2 and DOK 3 problems or submit ones I've made?*

Goals

- Engaging problem solving
 - Real world problem-based learning
 - Higher depth of knowledge problems
- Better implementation
 - Improve our ability to ask questions
 - Practice preparing to implement a lesson
 - Figure out how to deal with uncomfortable situations

What People Are Saying

Robert was a dynamic trainer who presented information in an unassuming, learner-centered way, allowing teacher participants to think about their own teaching and apply the new strategies accordingly. Throughout the two days, Robert modeled sound instructional strategies as he explained the why, the what, and the how of implementing this approach to math instruction. He

PERFORMANCE TASK

CEREAL BOXES

A cereal company uses cereal boxes that are rectangular prisms. The boxes have the dimensions shown.

- 12 inches high
- 8 inches wide
- 2 inches deep

The managers of the company want a new size for their cereal boxes. The new boxes have to be rectangular prisms. You will evaluate one box design the company proposed. Then you will create and propose your own design for the company.

Requirements for the new boxes:

- The new boxes have to use less cardboard than the

1

Determine the volume of the current cereal box with the dimensions 12 inches high, 8 inches wide, and 2 inches deep.

Find the volume, V , in cubic inches, of each box.

Volume of Original Box: $V = \underline{\hspace{1cm}} \text{ in}^3$

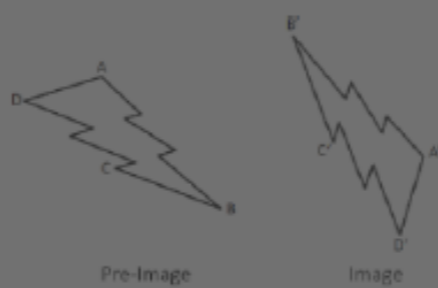

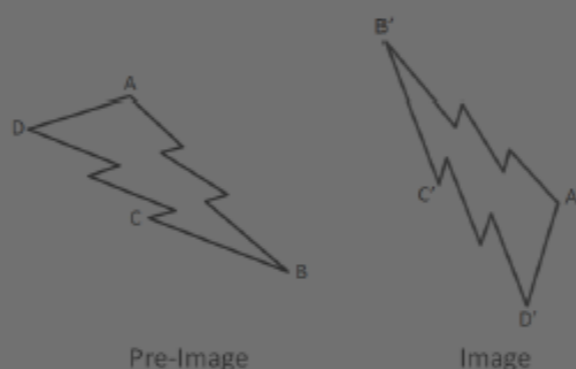

1	2	3
4	5	6
7	8	9
0	.	-

2

Label the dimensions of the net for the current cereal box with dimensions 12 inches high, 8 inches wide, and 2 inches deep.

Topic	Surface Area and Volume	Probability	Transformations	Factoring Quadratics	Quadratics in Vertex Form
CCSS Standard(s)	<ul style="list-style-type: none"> 6.G.4 7.G.6 	<ul style="list-style-type: none"> 7.SP.5 7.SP.7 	<ul style="list-style-type: none"> 8.G.1 G-CO.5 	<ul style="list-style-type: none"> A-SSE.3a 	<ul style="list-style-type: none"> F-IF.7a
DOK 1 Example	Find the surface area of a rectangular prism that measures 3 units by 4 units by 5 units.	What is the probability of rolling a sum of 5 using two 6-sided dice?	Rotate the image below 90° counterclockwise and reflect it across a horizontal line. 	Find the factors: $2x^2 + 7x + 3$	Find the roots and maximum of the quadratic equation below. $y = -3(x - 4)^2 - 3$
DOK 2 Example	List the measurements of three different rectangular prisms that each has a surface area of 20 square units.	What value(s) have a 1/12 probability of being rolled as the sum of two 6-sided dice?	List three sequences of transformations that take pre-image ABCD to image A'B'C'D'. 	Fill in the blank with integers so that the quadratic expression is factorable. $x^2 + __x + 4$	Create three equations for quadratics in vertex form that have roots at 3 and 5 but have different maximum and/or minimum values.
DOK 3 Example	What is the greatest volume you can make with a rectangular prism that has a surface area of 20 square units?	Fill in the blanks to complete this sentence using the whole numbers 1 through 9, no more than one time each. Rolling a sum of $__$ on two $__$ -sided dice is the same probability as rolling a sum of $__$ on two $__$ -sided dice.	What is the fewest number of transformations needed to take pre-image ABCD to image A'B'C'D'? 	Fill the blank by finding the largest and smallest integers that will make the quadratic expression factorable. $2x^2 + 3x + __$	Create a quadratic equation with the largest maximum value using the whole numbers 1 through 9, no more than one time each. $y = -\square(x - \square)^2 + \square$

Discussion Questions

- How will problem-based lessons like these prepare students for a performance task like the Cereal Box?
- What skills might students still be lacking to be successful with a problem like this?

Why Are You Using That Problem?

- Use the problem to introduce a new concept
 - Best Case:
 - Great context for beginning a unit
 - Worst Case:
 - What was the purpose of this problem?
 - Why didn't you finish it?
 - Why didn't you let students struggle through it?
 - Did the teacher end the problem because he or she was confused and gave up?

Why Are You Using That Problem?

- Productive struggle
 - Best Case:
 - Students worked hard and made connections.
 - Worst Case:
 - Why did the teacher let the students sit there confused instead of telling them what to do?
 - Did the students even learn anything because they never figured out the answer?
 - Why didn't the teacher finish the problem? Did she lose track of time?

Why Are You Using That Problem?

- Problem completion
 - Best Case:
 - Everyone experienced a complete problem.
 - Worst Case:
 - Who really did the work today: the students or the teacher?
 - Why did the teacher not see all those great opportunities for students to make their own connections and take advantage of them?
 - Why did the teacher give such obvious hints and tell them what to do?

***FIVE
PRACTICES***

Discussion Questions

- “Giving students too much or too little support, or too much direction, can result in a decline in the cognitive demands of the task.” (p. 550) Why?
- “By making purposeful choices about the order in which students’ work is shared, teachers can maximize the chances that their mathematical goals for the discussion will be achieved.” (p. 554) What ways do teachers currently select students? How would you suggest they change their selection process after reading this?
- What challenges might teachers have when trying to “connect” student solutions? (p. 554)

Implementing the Five Practices

1. Pick a selection strategy you anticipate using before looking at the student work.
2. Next, review the student work to simulate the reality that you won't know what students will actually do.
3. Figure out which students you would have share their mathematical work.
4. Determine the order you would have those students present their work.
5. Decide on which connections you would emphasize between the students' work and mathematical ideas.

Posters

- At the top of the poster, list the selection strategy used by your group. For example:
 - Starting with the most commonly used strategy and moving to one that few students used.
 - Starting with a strategy that is more concrete and moving to strategies that are more abstract.
 - Incorporating wrong answers to address common misconceptions (“Who made the best mistake?”)
- Attach those students’ work to the poster in the order that you would present it.
- Next to the student work list the questions you would ask the student(s) or ideas that you would want to come out as a result of showing that student’s work.

- Change

What does this
mean for math
education?

- Change
- Transition
 - Ending

- People may not stop doing anything. They may try to do all the old things and the new things. Soon they burn out with the overload.
- People make their own decisions about what to discard and what to keep, and the result is inconsistency and chaos.
- People toss out everything that was done in the past.

- Change
- Transition
 - Ending
 - Neutral Zone

- Change
- Transition
 - Ending
 - Neutral Zone
 - New Beginning

Pre-Mortem

- The lesson flopped. What went wrong?
- You have sixty seconds to write down all the reasons the lesson did not go well.
- Create a combined list with your neighbors.
- Then discuss “less helpful” and “more helpful” ways you could address them if they do happen.

Setting Up The Problem

- What do you do when students ask for data/information you don't have, hadn't considered, or forgot to get?
- What do you do when students ask for information that is probably not important or that they don't actually need?

IA conclusion each for different items
CONCLUSION Each Item is good

in store purchase, exclusions

What is your conclusion? How did you reach that conclusion?

If the item is \$15 use the \$5 off because

$$15 - 5 = 10 \text{ and } 15 - 20\% = 12$$

If the item is \$47 it is

better to use the 20% off coupon because

$$47 - 5 = 42 \quad 47 - 20\% = 37.60$$

\$5 off 20% off

42 vs 37.60

\$5 off	20% off
18 vs	18.40

$$23 - 5 = 18$$

$$23 - 20\% = 18.40$$

Goals

- ✓ Engaging problem solving
 - ✓ Real world problem-based learning
 - ✓ Higher depth of knowledge problems
- ✓ Better implementation
 - ✓ Improve our ability to ask questions
 - ✓ Practice preparing to implement a lesson
 - ✓ Figure out how to deal with uncomfortable situations

Construction

- Pick two:

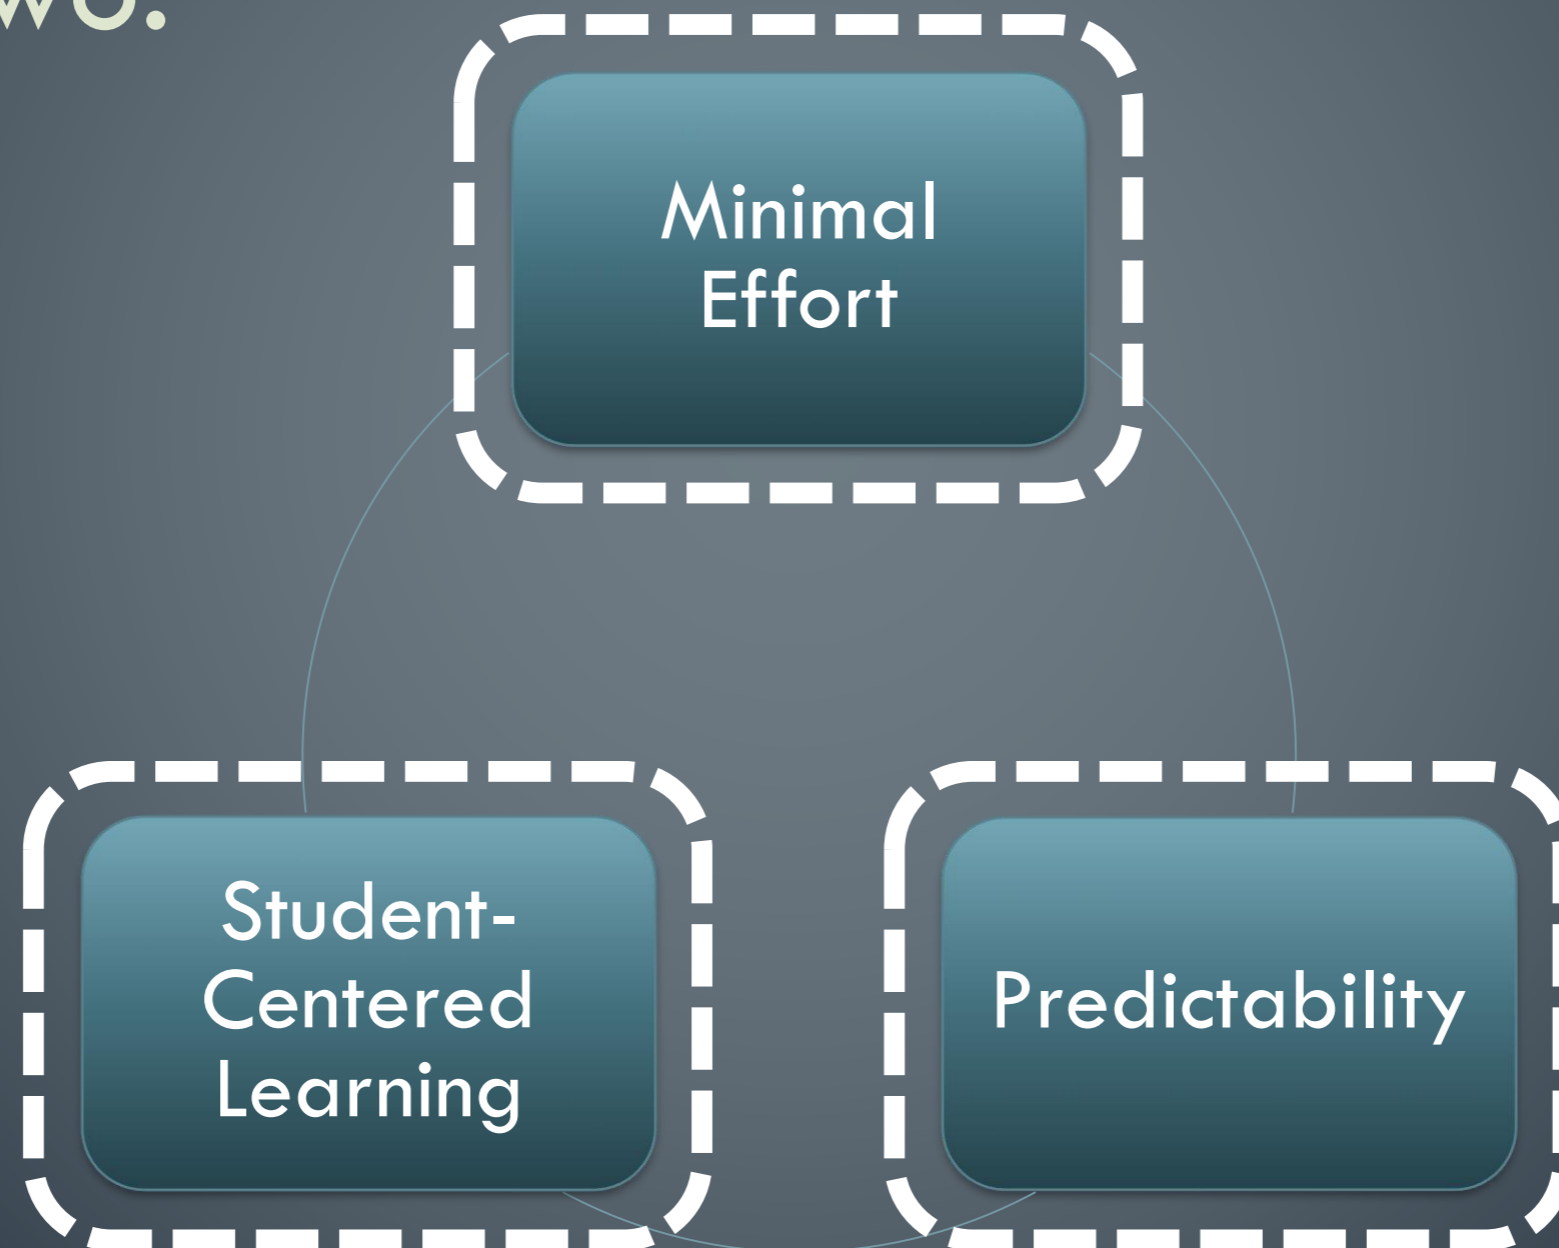

Family

- Pick two:

Problem-Based Learning

- Pick two:

Call to Action

- ▶ Implement one problem-based lesson in your classroom in the next two weeks of school.
- ▶ Implement one DOK 2 or DOK 3 problem in your classroom in the next two weeks of school.
