Standards for Mathematical Practice

- 1. Make sense of problems and persevere in solving them.
- 2. Reason abstractly and quantitatively.
- 3. Construct viable arguments and critique the reasoning of others.

Levels of Convincing

Critique the reasoning of others

Inspired by Connecting Mathematical Ideas by Jo Boaler and Cathy Humphreys

bun + produce + meat + cheese + meat + cheese = \$2.65

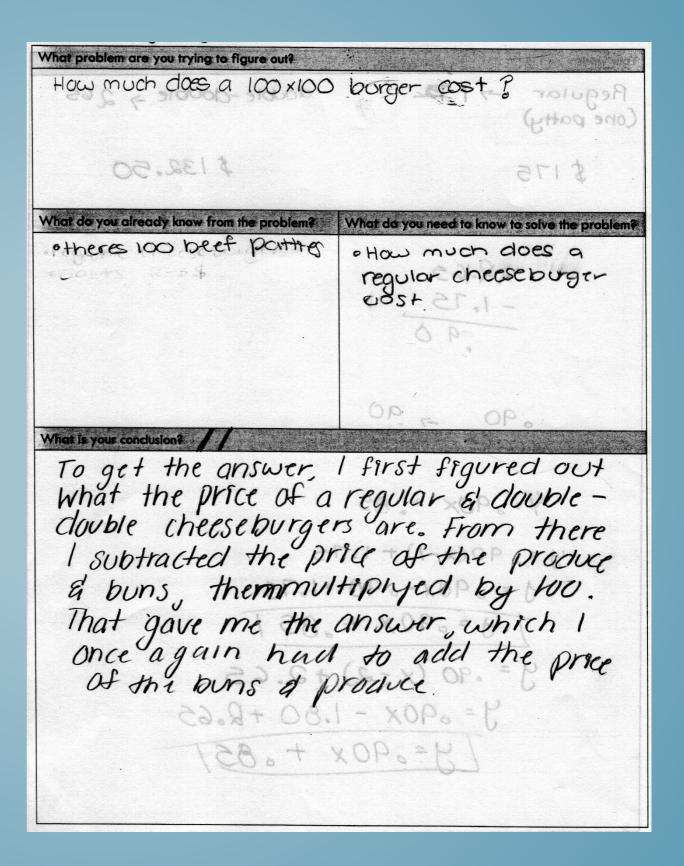

bun + produce + meat + cheese = \$1.75

meat + cheese = \$0.90

The Reality

- Students needed guidance to figure out a layer's cost
- Not every class is ready to go straight to 100x100
- Common wrong answers included:
 - \$175.00 (\$1.75 x 100 cheeseburgers)
 - \$132.50 (\$2.65 x 50 Double-Doubles)
- Students had equations that had more than X patties
- Students were surprised to see three different equations:
 - Starting with a Double-Double
 - Starting with a cheeseburger
 - Starting with produce and bun only

STUDENT WORK

What is your conclusion?

The only difference between a double double and a choeseburger is one patty and one slice of cheese. So you subtract the prices of the two to find the price of only one postty & cheese. You then use that number (.90) & subtract it from the price of all the extra stuff. Multiply by 100

What is your conclusion?

A 100×100 at In-h-out cost \$90.85. To solve that, you start by subtracting the price of a cheese burger from a double double. The answer (.90) is the price of a patty and cheese slice. You multiply (.90) by one less patty than what you want. (x-1), and you add the price of a cheese burger (1.75). You end up with the eq. [y=.90(x-1)+1.75.]. You end up with the eq. [y=.90(x-1)+1.75.]. For the $100\times(00$, you plug in 100 to the (x) and you end up with \$90.85.

2.40 And I MI I TOWN

3 355 checke

vith \$90.85.

$$y = .90(100-1) + 1.75$$

 $y = 89.10 + 1.75$
 $y = 90.85$

What is your conclusion?

Figure the price difference from the Double-Double with a cheese burger. Then find out the prize for the produce and cheese-beef.

9et total into \$ 90.85

WHO THINK

THEY HAVE THEIR CHILD IN THE RIGHT SEAT.

There are 125 sheep and 5 dogs in a flock. How old is the shepherd?

Of the 32 students I interviewed...

- 75% of them gave me numerical responses
- 2 students calculated the answer to be 130 (125 + 5)
- 2 students calculated the answer to be 120 (125 5)
- 12 students calculated the answer to be 25 (125 \div 5)
- 0 students calculated the answer to be 625 (125 x 5)
- 4 students stated that they guessed their answer (90, 5, 42, and 50)
- 4 students tried to divide 125 by 5 but could not correctly implement the procedure

Takeaways

- Making sense of mathematics
- Intellectual autonomy
 - •Intellectual autonomy is about being able to think for yourself and not being dependent on others for the direction and control of one's thinking.

What Does the NHTSA Say?

Key Statistics and Consumer Insights:

Motor vehicle crashes are the leading cause of death for children age 1 through 12 years old.¹

According to a NHTSA study, 3 out of 4 kids are not as secure in the car as they should be because their car seats are not being used correctly.

be reduced by about half if the correct child safety seats were always used.

 $^{^1}$ Source: Based on the latest mortality data currently available from the CDC's National Center for Health Statistics.

- "because they have their child in the right seat"
- "because their car seats are not being used correctly"

Sinkhole Dimensions

 Slate: "A sinkhole, 65 feet across and 100 feet deep"

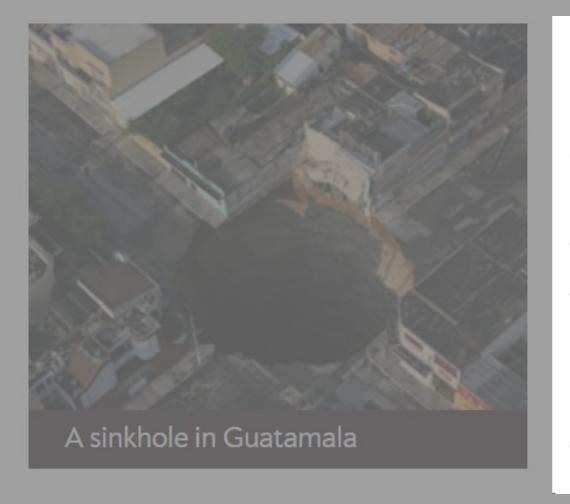

How To Fix a Giant Sinkhole

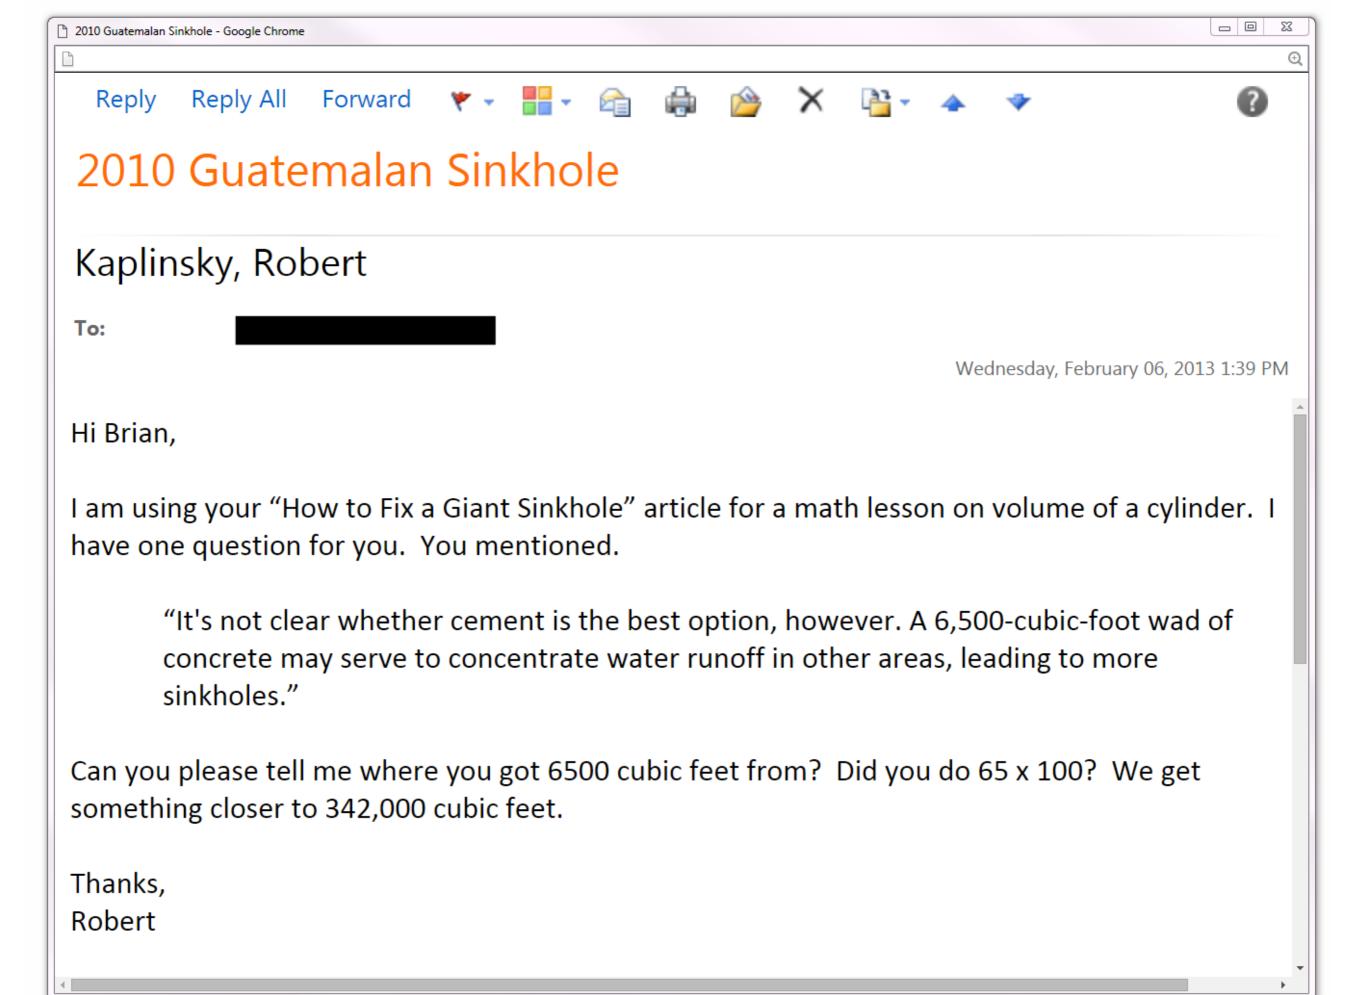

The cement method vs. the graded-filter technique.

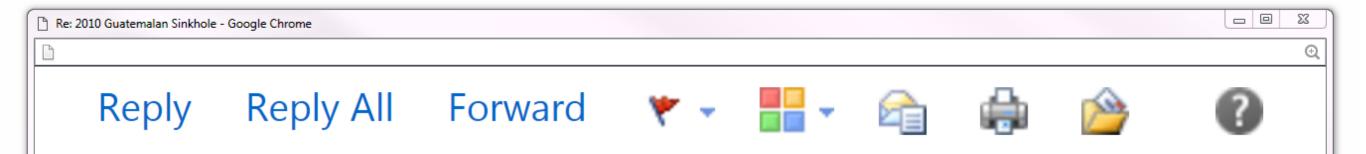

By Brian Palmer

It's not clear whether cement is the best option, however. A 6,500-cubic-foot wad of concrete may serve to concentrate water runoff in other areas, leading to more sinkholes. Many engineers prefer the **graded-filter technique**, in which the hole is filled with a layer of boulders, then a layer of smaller rocks, and, finally, a layer of gravel. This fills the hole, more or less, while permitting water to drain through the area.

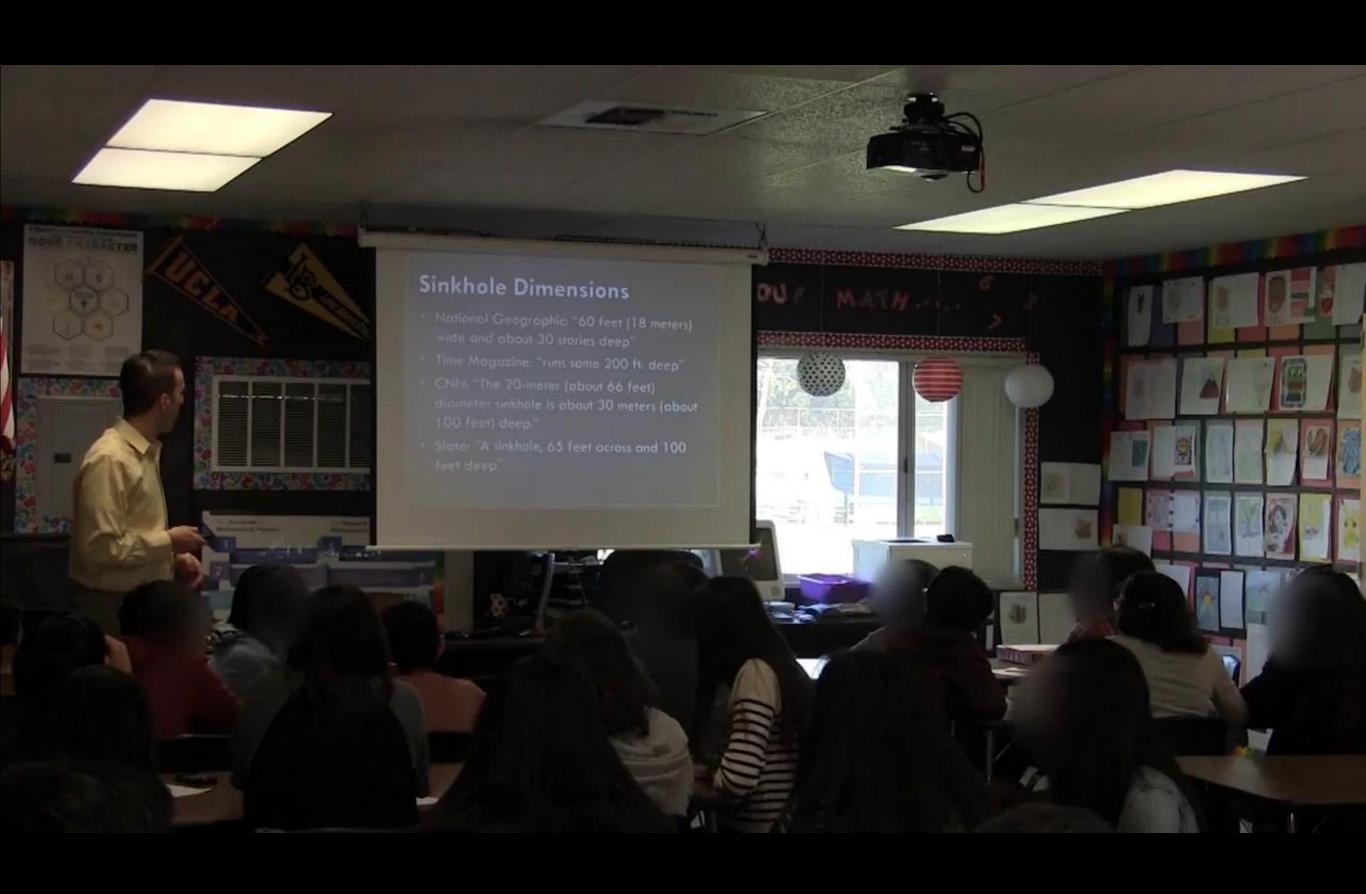

Re: 2010 Guatemalan Sinkhole

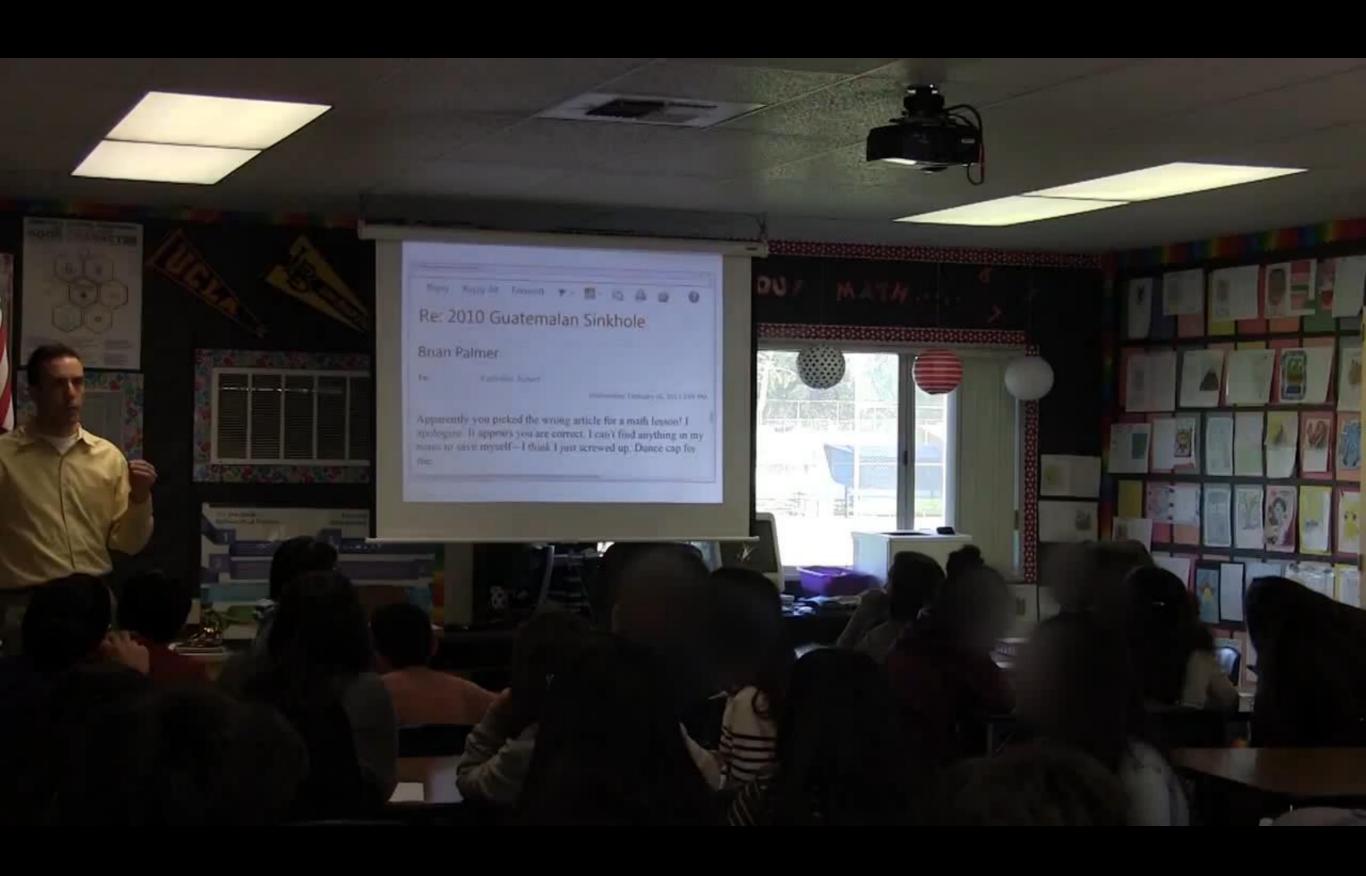

Brian Palmer

To: Kaplinsky, Robert

Wednesday, February 06, 2013 2:01 PM

Apparently you picked the wrong article for a math lesson! I apologize. It appears you are correct. I can't find anything in my notes to save myself-- I think I just screwed up. Dunce cap for me.

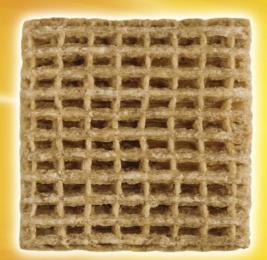

Student Reflections

- "I didn't say his answer was wrong since he is supposed to know more than an average 8th grader."
- "Even though Brian was wrong, no one corrected him, because of fear of being wrong and lack of confidence in ourselves."
- "I didn't say anything when we were shown the 'right' answer because I thought that it must be right because he's the author, but I knew in my mind he was actually wrong."
- "I think that I should be the one who argues for my opinion, not just listening to others and accepting that my answer is wrong all the time."

OLD (Boring)

NEW Diamond Shreddies

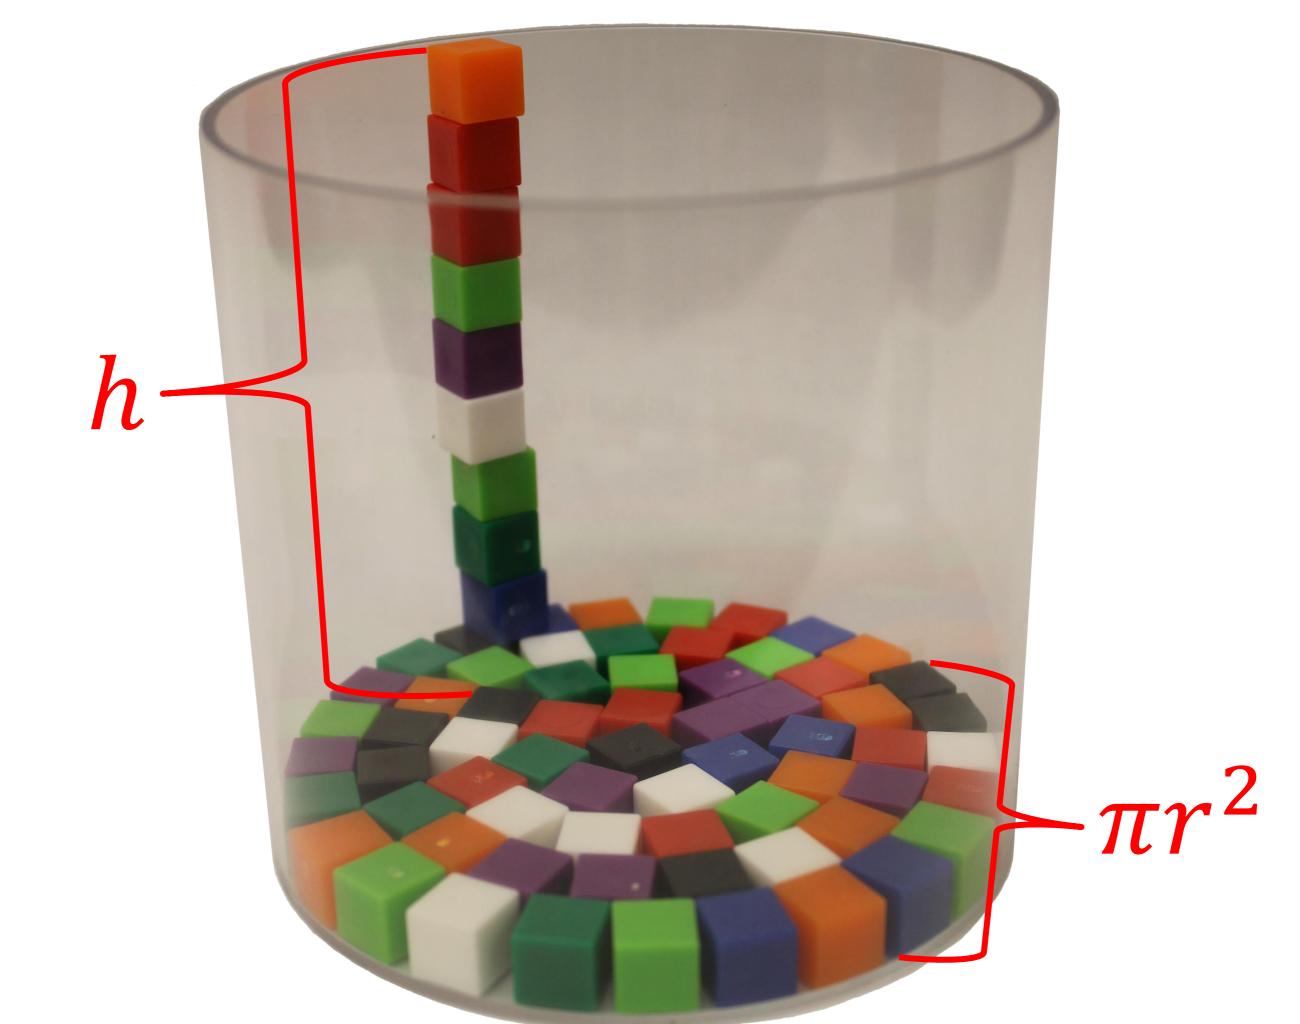

Cereal

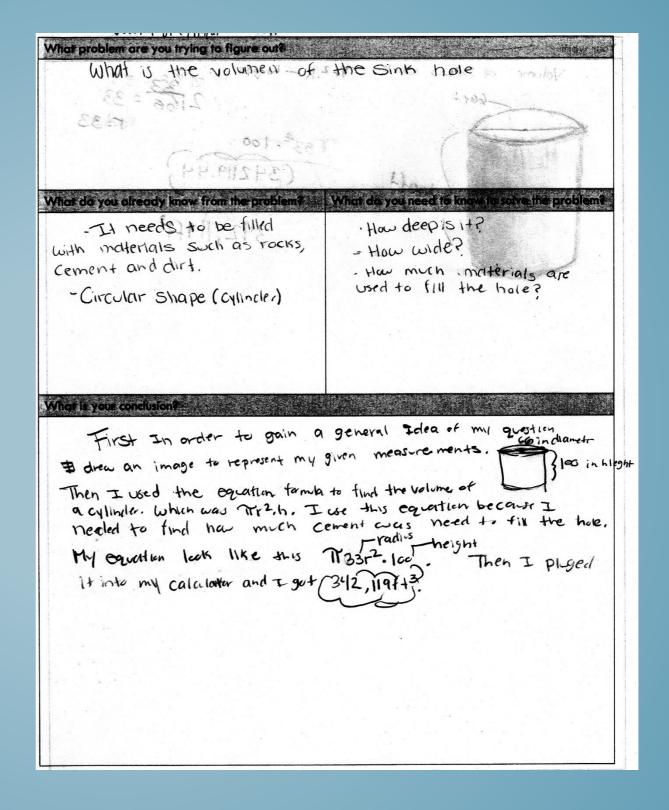

"Kraft Foods saw an immediate 18% increase in baseline sales of Shreddies within the first month alone, and for months thereafter."

The Reality

- Some students felt anxious about not having enough information to take a guess.
- However, guessing helped students determine what they knew and needed to know.
- Students modeled the problem differently:
 - Cylinder
 - Semi-sphere
 - Truncated cone
- Students didn't know what units to use.

STUDENT WORK

How Do We Assess Student Work?

- Option #1 Don't assess the problem
- Option #2 Use general purpose rubric
- Option #3 Use a problem-specific rubric

Option #2 - General Purpose Rubric

- One point for student reaching the correct conclusion.
- One point for student providing sufficient reasoning to support this conclusion.

What is your conclusion?

In order to solve this problem, you need the width and the height of the hole. Once you have it you plus them into the equation r27. In which is to find the volume. Once you find the volume you will know how much come you will need to order so that you could fill that the hole, which in this case would be 3412, 119 feet of cement.

What is your conclusion?

This particular sinkhole in Guatemala City, was about 20 meters (66 feet) indiameter and about 30 meters (100 feet) deep. We are trying to find the volume of the hole to figure out how much material is needed to fill it. I used the cylinder volume formula (v= mr2h). When you plug in the radius and the height, you get v= 1 (33)2 (100). I did not use bb as my radius, because that is my diameter. Radius is half of the diameter. After ger solve, ger are left with 342, 119.44 ft? You don't use ft or ft because the hole 13 3 dimensional. From here on, you just use the material cost and amount to find the price of

In order to fill the smkhde with coment. They will need 342,119 ft3 of cement. How is this possible? Donneter- cele feet, but we are working for radius. 66/5 = 133) Non me day our nagin my 35°

1=33) So we have a nadrus and height. Depth=100 feet.) We can use the volume of a cylinder formula. which is u= pr2h

> V=74(33)2 - 100 U= 74 (10004) = 100 V= 3421.20 1 V= 345119.44

Option #3 - Problem-Specific Rubric

Requirement	Possible Points	Points Earned
Student finds the correct answer based on the dimensions used.	3	
Student uses the correct units (i.e., cubic feet/meters for volume and feet/meters for length)	1	
Student correctly uses half the diameter for the radius and explains why.	2	
Student creates a narrative using sentences to explain his or her reasoning.	2	

Correct answer	/3	Explains $\frac{d}{2} = r$	/2
Correct units	/1	Narrative w/ sentences	/2

What is your conclusion?

 $V = 74(1589) \cdot 100$
 $V = 3421.20$
 $V = 3421.9.44$

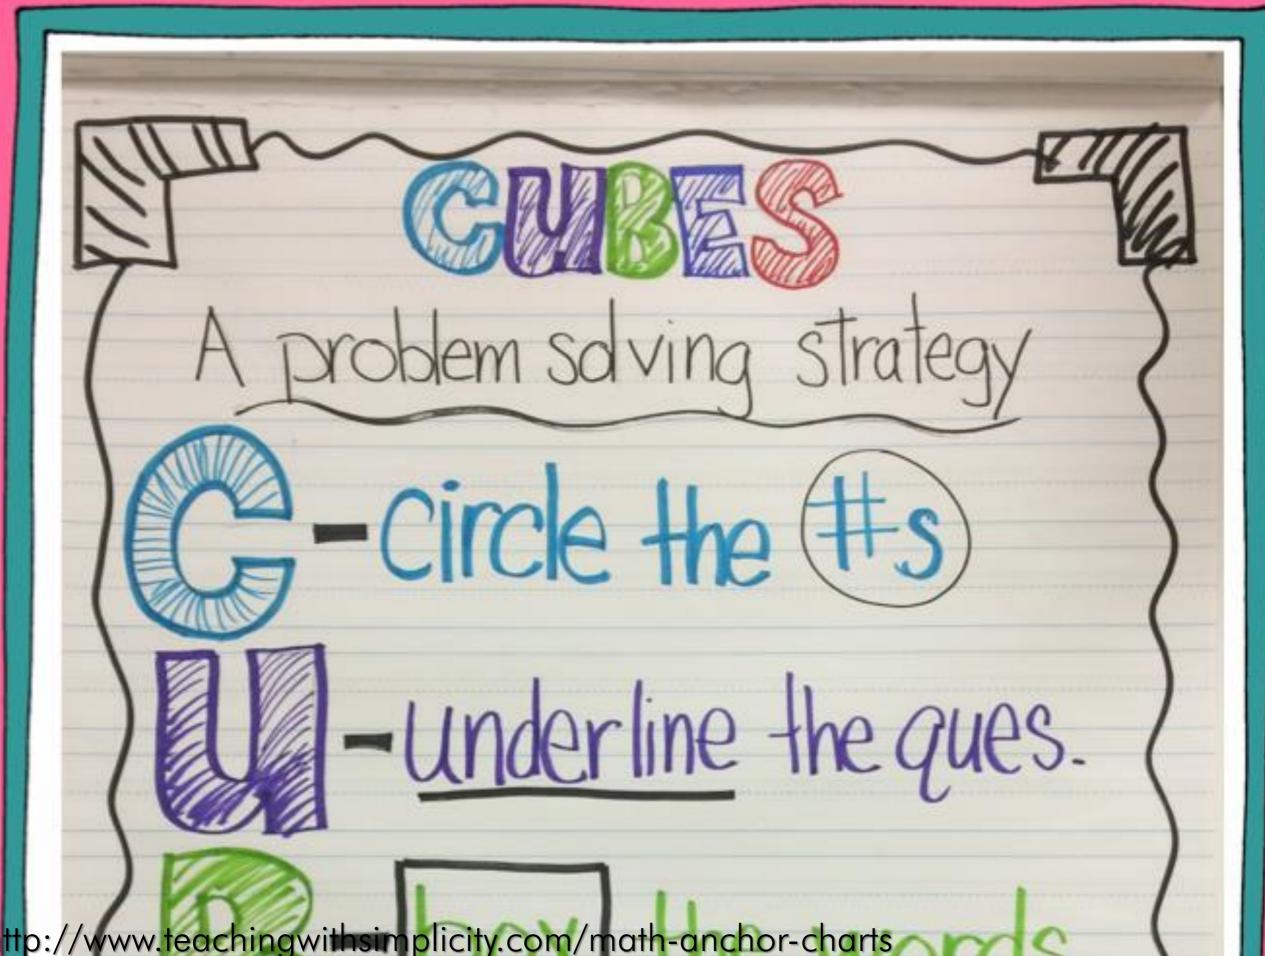

Complicated or Complex?

- Using an electric mixer, whip the butter until it is pale. This will take at least 5 minutes on high.
- 2. Gradually add in the icing mixture and vanilla until well combined.
- 3. With the mixer running, add in food colouring until you get to the Cookie Monster colour. This may be a lot if you are using liquid food colouring or a little if using gel food colouring.
- 4. Add in the milk and mix until the frosting puffs up.
- 5. Fill a piping bag with a fluted nozzle and pipe on icing.
- 6. With the writing icing, place black spots on the marshmallows for pupils.
- 7. Place on each cupcake.
- 8. Cut cookies in half and place in 'mouth'.

http://www.teachingwithsimplicity.com/math-anchor-charts

WHAT ISN'T MATHEMATICAL MODELING?

- It is not modeling in the sense of, "I do; now you do."
- It is not modeling in the sense of using manipulatives to represent mathematical concepts.
- It is not modeling in the sense of a "model" being just a graph, equation, or function.
- It is not just starting with a real world situation and solving a math problem.
- It is not beginning with the mathematics and then moving to the real world.

Problem Solving Framework

Inspired by Geoff Krall's resources at emergentmath.com

What problem are you trying to figure out? What guesses do you have?	
What do you already know from the problem? What do you need to know to solve the problem	JŞ.
What is your conclusion? How did you reach that conclusion?	

The Four C's

- Communication
- Curiosity
- Critical Thinking
- Content Knowledge

Goals

- Engaging problem solving
 - Real world problem-based learning
 - Higher depth of knowledge problems
- ☐ Better implementation
 - Improve our ability to ask questions
 - Practice preparing to implement a lesson
 - ☐ Figure out how to deal with uncomfortable situations

Questioning Scenarios

- The activity begins with teachers in groups of three taking the roles of teacher, student, or observer.
- The individuals playing the role of teacher and student each receive a slip of paper describing their scenario.
- The individual playing the role of observer waits to record all of the teacher's questions to the student.
- Once the activity begins, the teacher will talk to the student in the context of the scenario they read about on the slips of paper.

What did you get for the area of the circle with a radius of 2 units?

4 pi

Great. Do you have any questions?

What did you get for the area of the circle with a radius of 2 units?

4 pi

Great. How did you get your answer?

The radius is 2 so I plugged it into 2 pi r and got 4 pi.

Goals

- Engaging problem solving
 - Real world problem-based learning
 - Higher depth of knowledge problems
- ☐ Better implementation
 - Improve our ability to ask questions
 - Practice preparing to implement a lesson
 - ☐ Figure out how to deal with uncomfortable situations

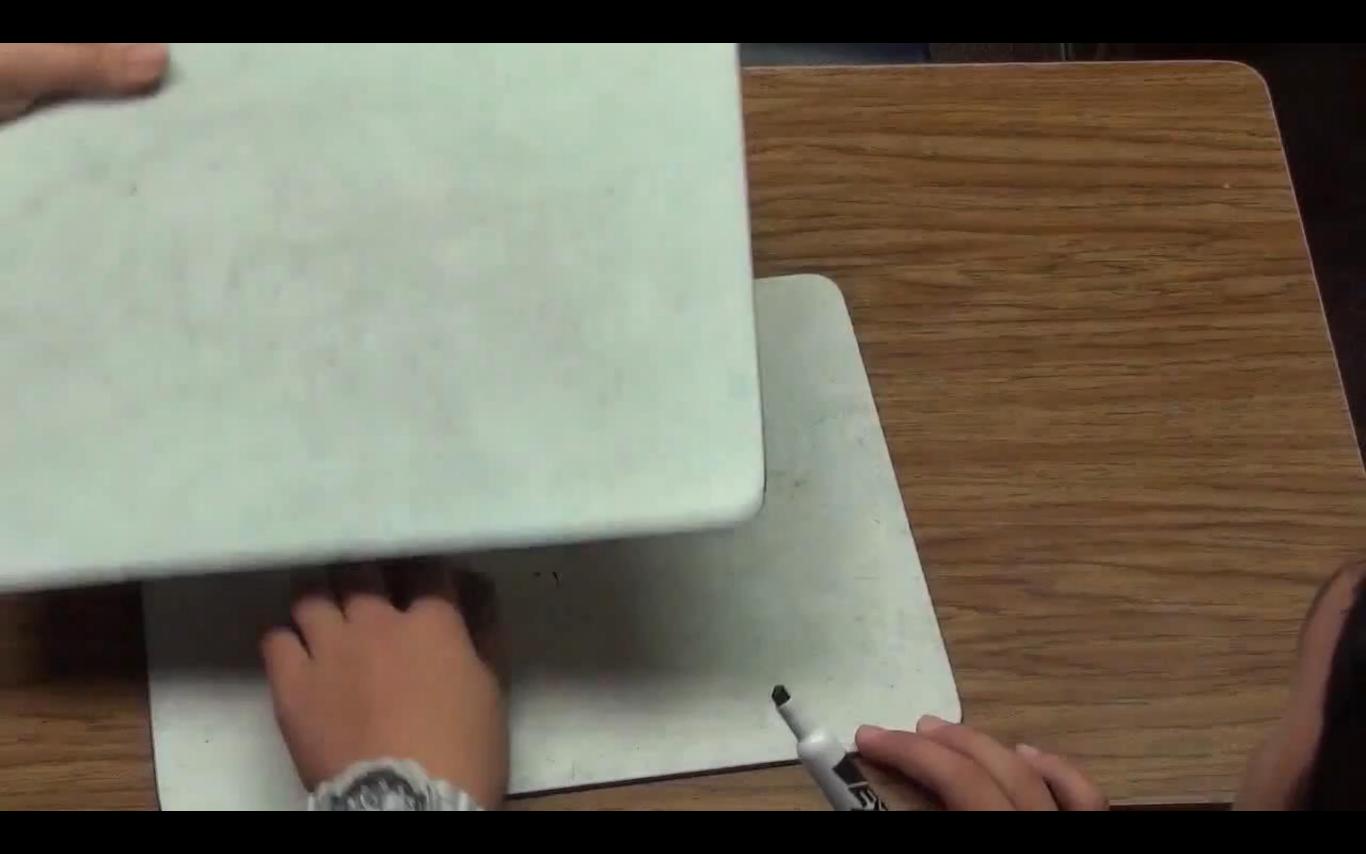

CCSS.MATH.CONTENT.4.MD.A.3 Apply the area and perimeter formulas for rectangles in real world and mathematical problems. equal intensity, to of each grade: conceptua skills and fluency, and application.

Procedural Skill and Fluency

Procedural Skill and Fluency

Of all the rectangles with a perimeter of 24 units, which one has the most area?

Components of Rigor

Procedural Skill and Fluency

Conceptual Understanding

Defining the Problem

- Students appear to demonstrate "deep, authentic command of mathematical concepts" when given commonly used problems.
- However with more challenging problems, the same students seem to no longer demonstrate that command.

Addressing the Problem

- First, we must have a clear understanding about why these problems are different from one another.
- Next, we need to practice using these problems so that we understand how students may react to them.
- Last, we need a source that can provide us with a variety of free problems.

DOK Distinguishing Between Depth of Knowledge Levels in Mathematics

Topic	Adding Whole Numbers	Money	Fractions on a Number Line	Area and Perimeter	Subtracting Mixed Numbers
CCSS	• 1.NBT.4	• 2.MD.8	• 3.NF.2	• 3.MD.8	• 5.NF.1
Standard(s)	• 2.NBT.5			• 4.MD.3	
DOK 1	Find the sum.	If you have 2	Which point is located at $\frac{7}{12}$	Find the perimeter	Find the difference.
Example	44 + 27 =	dimes and 3 pennies, how many cents do you have	below? L M N O 12 0 12 12	of a rectangle that measures 4 units by 8 units.	$5\frac{1}{2} - 4\frac{2}{3} =$
DOK 2 Example	Fill in the boxes below using the whole numbers 1 through 9, no more than one time each, so that you make a true equation. + 53 =	Make 47¢ in three different ways with either quarters, dimes, nickels, or pennies.	Label the point where $\frac{3}{4}$ belongs on the number line below. Be as precise as possible.	List the measurements of three different rectangles that each has a perimeter of 20 units.	Create three different mixed numbers that will make the equation true by using the whole numbers 1 through 9, no more than one time each. You may reuse the same whole numbers for each of the three mixed numbers. $5\frac{4}{5} - \boxed{} = 3\frac{1}{20}$
DOK 3 Example	Make the largest sum by filling in the boxes below using the whole numbers 1 through 9, no more than one time each.	Make 47¢ using exactly 6 coins with either quarters, dimes, nickels, or pennies.	Create 5 fractions using the whole numbers 0 through 9, exactly one time each as numerators and denominators, and place them all on a number line.	What is the greatest area you can make with a rectangle that has a perimeter of 24 units?	Make the smallest difference by filling in the boxes below using the whole numbers 1 through 9, no more than one time each.

DOK Level Differences

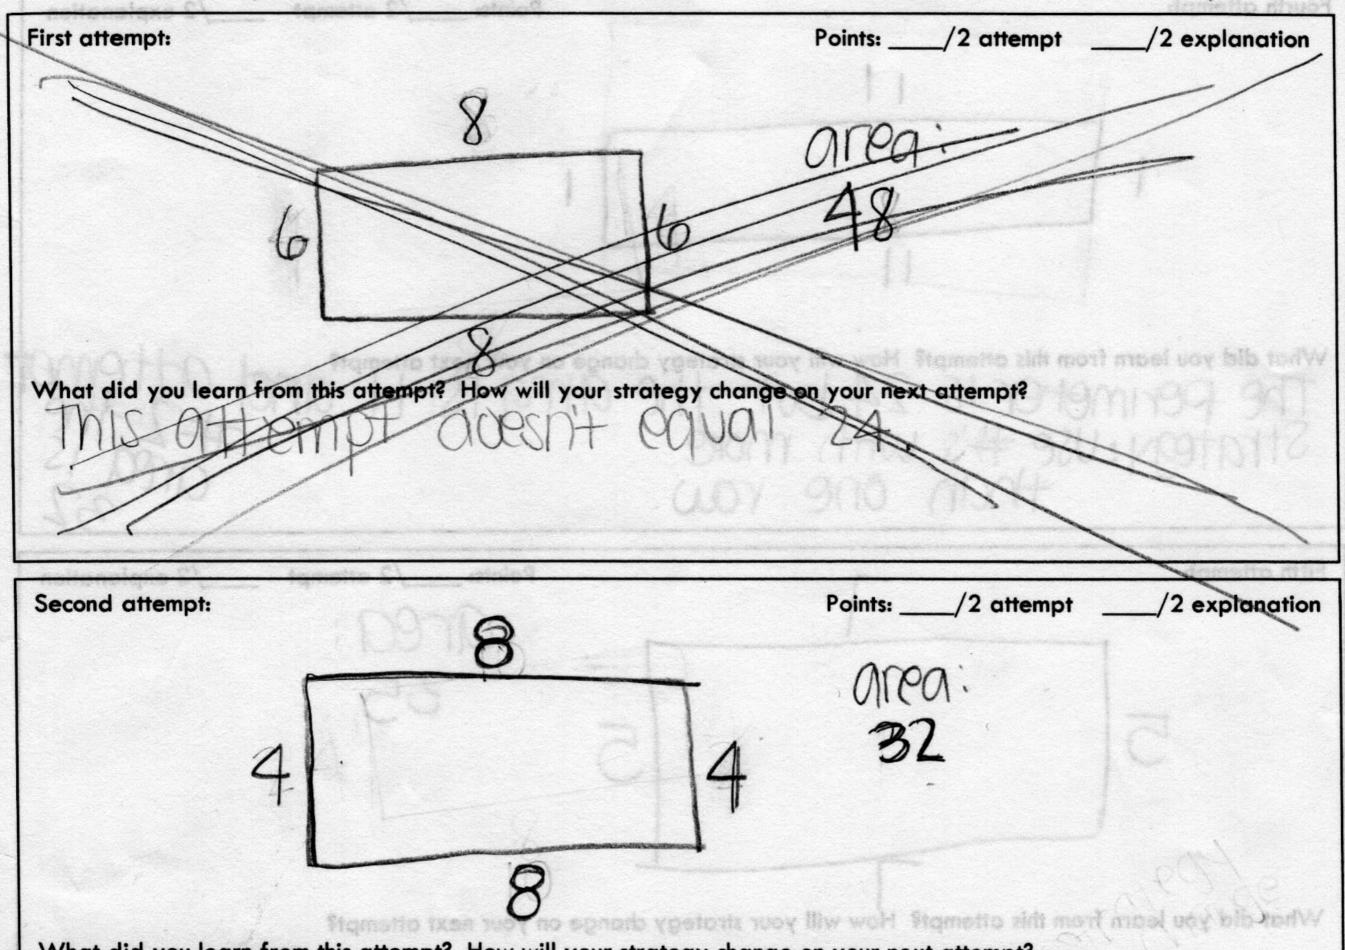

- Level 1: Recall & Reproduction
 - Often a trivial application of facts.
 - Generally requires little to no cognitive effort beyond remembering the right formula.
 - Usually only one answer.
- Level 2: Skills & Concepts
 - Usually requires more than one step to solve.
 - Often multiple answers.

- Level 3: Strategic Thinking
 - Usually requires critical thinking about the best way to approach a problem.
 - May be multiple answers or a single optimal answer.
 - Often challenging enough to make your head hurt.
- Level 4: Extended Thinking
 - In mathematics these are generally represented by performance tasks or problem-based lessons.

Adding Decimals

Use the numbers 1 through 9, exactly one time each, to fill in the boxes and make three decimals whose sum is as close to 1 as possible.

PERFORMANCE TASK

CEREAL BOXES

A cereal company uses cereal boxes that are rectangular prisms The boxes have the dimensions shown.

- 12 inches high
- 8 inches wide
- 2 inches deep

The managers of the company want a new size for their cereal boxes. The new boxes have to be rectangular prisms. You will evaluate one box design the company proposed. Then you will create and propose your own design for the company.

Requirements for the new boxes:

• The new boxes have to use less cardboard than the

Determine the volume of the current cereal box with the dimensions 12 inches high, 8 inches wide, and 2 inches deep.

Find the volume, \(V \), in cubic inches, of each box.

Volume of Original Box: \(V = __ \) in \(\)

1 2 3 4 5 6 7 8 9 0 . -

Label the dimensions of the net for the current cereal box with

dimensions 12 inches high, 8 inches wide, and 2 inches deep.

Discussion Questions

- How will problem-based lessons like these prepare students for a performance task like the Cereal Box?
- What skills might students still be lacking to be successful with a problem like this?

Why Are You Using That Problem?

- Use the problem to introduce a new concept
 - Best Case:
 - Great context for beginning a unit
 - Worst Case:
 - What was the purpose of this problem?
 - Why didn't you finish it?
 - Why didn't you let students struggle through it?
 - Did the teacher end the problem because he or she was confused and gave up?

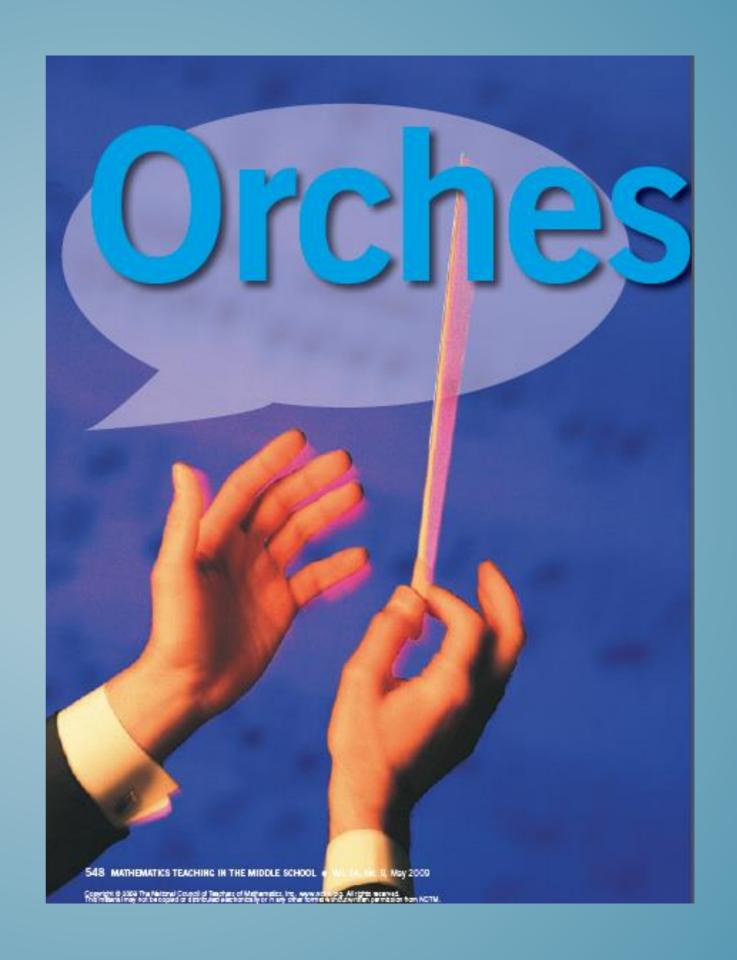

Why Are You Using That Problem?

- Productive struggle
 - Best Case:
 - Students worked hard and made connections.
 - Worst Case:
 - Why did the teacher let the students sit there confused instead of telling them what to do?
 - Did the students even learn anything because they never figured out the answer?
 - Why didn't the teacher finish the problem? Did she lose track of time?

Why Are You Using That Problem?

- Problem completion
 - Best Case:
 - Everyone experienced a complete problem.
 - Worst Case:
 - Who really did the work today: the students or the teacher?
 - Why did the teacher not see all those great opportunities for students to make their own connections and take advantage of them?
 - Why did the teacher give such obvious hints and tell them what to do?

FIVE PRACTICES

Discussion Questions

- "Giving students too much or too little support, or too much direction, can result in a decline in the cognitive demands of the task." (p. 550) Why?
- "By making purposeful choices about the order in which students' work is shared, teachers can maximize the chances that their mathematical goals for the discussion will be achieved." (p. 554) What ways do teachers currently select students? How would you suggest they change their selection process after reading this?
- What challenges might teachers have when trying to "connect" student solutions? (p. 554)

Implementing the Five Practices

- Pick a selection strategy you anticipate using before looking at the student work.
- 2. Next, review the student work to simulate the reality that you won't know what students will actually do.
- 3. Figure out which students you would have share their mathematical work.
- 4. Determine the order you would have those students present their work.
- 5. Decide on which connections you would emphasize between the students' work and mathematical ideas.

Posters

- At the top of the poster, list the selection strategy used by your group. For example:
 - Starting with the most commonly used strategy and moving to one that few students used.
 - Starting with a strategy that is more concrete and moving to strategies that are more abstract.
 - Incorporating wrong answers to address common misconceptions ("Who made the best mistake?")
- Attach those students' work to the poster in the order that you would present it.
- Next to the student work list the questions you would ask the student(s) or ideas that you would want to come out as a result of showing that student's work.

- Change

 - Neutral Zone

- Change
- Transition
 - Ending
 - Neutral Zone
 - New Beginning

What does this mean for math education?

- Change
- Transition
 - Ending

- People may not stop doing anything. They may try to do all the old things <u>and</u> the new things. Soon they burn out with the overload.
- People make their own decisions about what to discard and what to keep, and the result is inconsistency and chaos.
- People toss out everything that was done in the past.

- Change
- Transition
 - Ending
 - Neutral Zone

- Change
- Transition
 - Ending
 - Neutral Zone
 - New Beginning

Goals

- Engaging problem solving
 - Real world problem-based learning
 - Higher depth of knowledge problems
- Better implementation
 - Improve our ability to ask questions
 - Practice preparing to implement a lesson
 - ☐ Figure out how to deal with uncomfortable situations

Get Updates!

- Receive the latest news, blog posts, and lessons by email.
- To get them:
 - Scan this QR code or
 - Go to tinyurl.com/RKupdates

Pre-Mortem

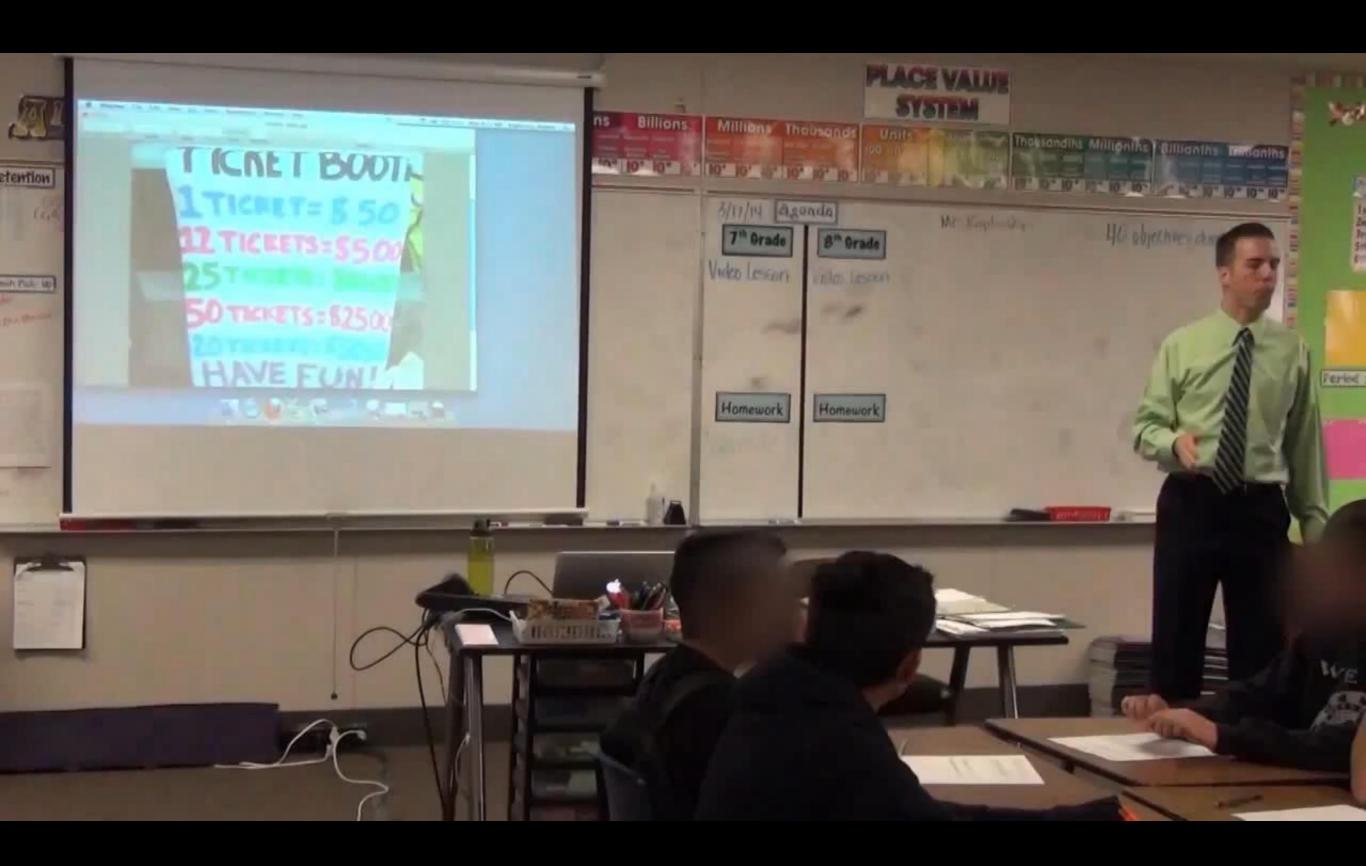

- The lesson flopped. What went wrong?
- You have sixty seconds to write down all the reasons the lesson did not go well.
- Create a combined list with your neighbors.
- Then discuss "less helpful" and "more helpful" ways you could address them if they do happen.

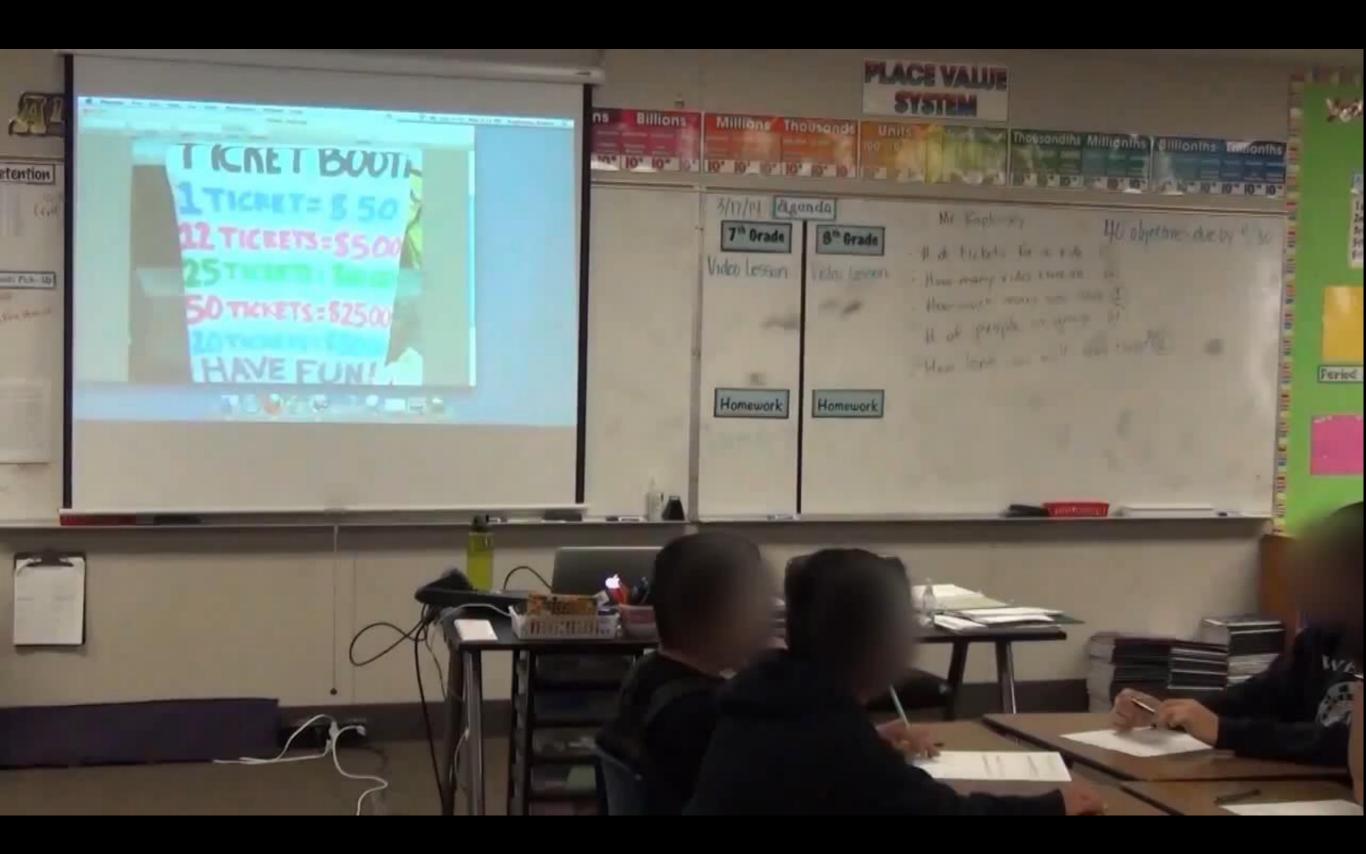

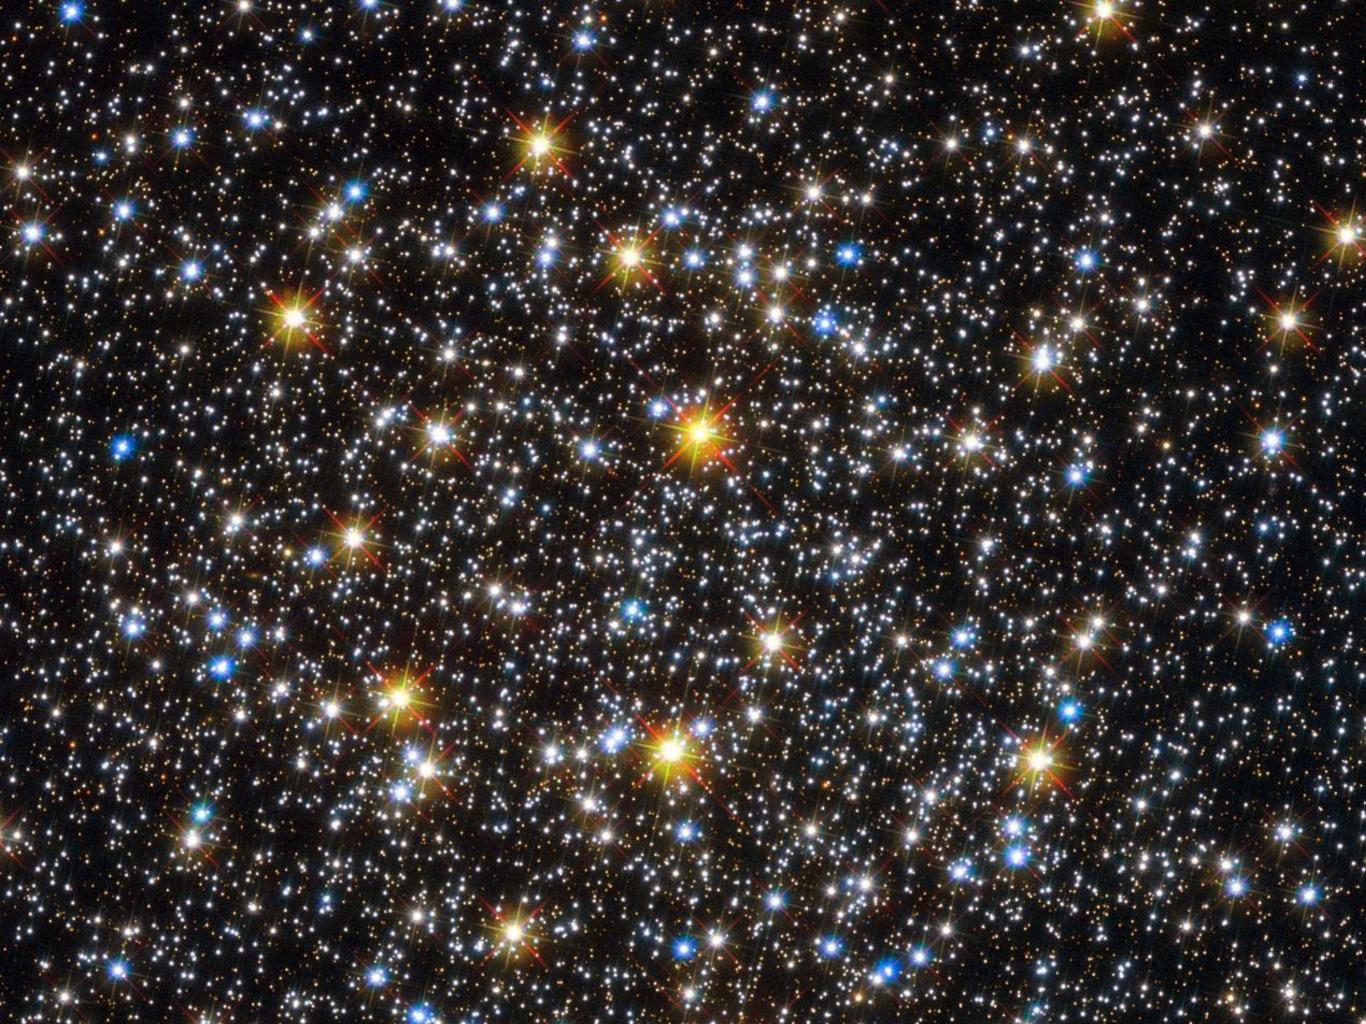

Setting Up The Problem

- What do you do when students ask for data/information you don't have, hadn't considered, or forgot to get?
- What do you do when students ask for information that is probably not important or that they don't actually need?

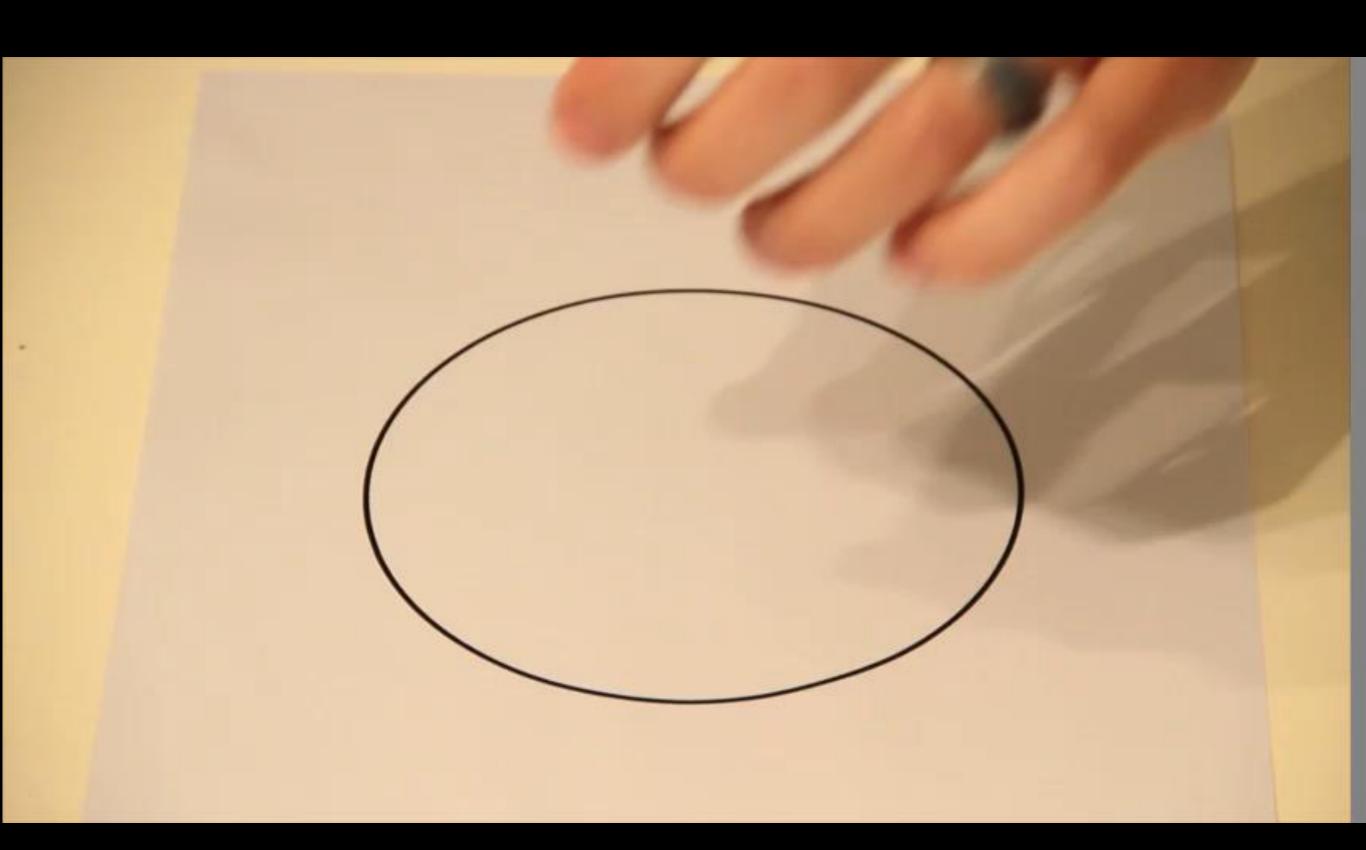

Setting Up The Problem

- What do you do when students ask for data/information you don't have, hadn't considered, or forgot to get?
- What do you do when students ask for information that is probably not important or that they don't actually need?
- What do you do when students don't know what to write for what they know and don't know?
- What do you do when you ask for a guess and they don't know?
- What do you do when they don't ask you for information that they need to solve the problem?

Problem Solving Process

 What do you do when students don't use the strategy you anticipated they would use?
