LEVELS OF CONVINCING

Inspired by *Thinking Mathematically* by J. Mason, L. Burton, and K. Stacey

MATH PRACTICES

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.

bun + produce + meat + cheese + meat + cheese = \$2.65

bun + produce + meat + cheese = \$1.75

meat + cheese = \$0.90

MATH PRACTICES

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

THE REALITY

- Students struggled to find a layer's cost.
- Common wrong answers included:
 - \$175.00 ($\1.75×100 cheeseburgers)
 - \$132.50 ($\2.65×50 Double-Doubles)
- Some classes were not ready for a 100x100.
- There were equations with more than N patties.
- Students were surprised to see many correct equations.

STUDENT

WORK

| What problem are you trying to figure out? | |
|--|--|
| How much does a 100x100 burger cost? Regular (one patty) \$1.75 Double \$2.25 | |
| What do you already know from the problem? | What do you need to know to solve the problem? |
| • there's 100 beef patties • costs 2.25\$ | • How much does a regular cheeseburger cost? 25.1 - OP. OP. = OP. |
| What is your conclusion? | |
| To get the answer, I first figured out what the price of a regular & double-double cheeseburgers are. From there I subtracted the price of the produce & buns, then multiplied by 100. That gave me the answer, which I once again had to add the price of the buns & produce. $22.8 + 0.1 - x \text{ OP}_0 = 6$ $128.0 + x \text{ OP}_0 = 6$ | |

What is your conclusion?

The only difference between a double double and a cheeseburger is one patty and one slice of cheese. So you subtract the prices of the two to find the price of only one patty & cheese. You then use that number (.90) & subtract it from the cost of one whole cheeseburger to find the price of all the extra stuff. Multiply by 100

What is your conclusion?

A 100x100 at In-n-Out cost \$90.85. To solve that, you start by subtracting the price of a cheeseburger from a double double. The answer (.90) is the price of a patty and cheese slice. You multiply (.90) by one less patty than what you want. (x-1), and you add the price of a cheeseburger (1.75).

You end up with the eq. $[y = .90(x-1) + 1.75]$.

For the 100x100, you plug in 100 to the (x) and you end up with \$90.85.

$$\left[\begin{array}{l} y = .90(100-1) + 1.75 \\ y = 89.10 + 1.75 \\ y = 90.85 \end{array} \right]$$

What is your conclusion?

Figure the price difference from the Double-Double with a cheeseburger.
Then find out the price for the produce and cheese-beef.

get total into \$90.85

SINKHOLE DIMENSIONS

- Slate Magazine
 - “A sinkhole, 65 feet across and 100 feet deep”

How To Fix a Giant Sinkhole

The cement method vs. the graded-filter technique.

18

0

By Brian Palmer

A sinkhole in Guatamala

It's not clear whether cement is the best option, however. A 6,500-cubic-foot wad of concrete may serve to concentrate water runoff in other areas, leading to more sinkholes. Many engineers prefer the **graded-filter technique**, in which the hole is filled with a layer of boulders, then a layer of smaller rocks, and, finally, a layer of gravel. This fills the hole, more or less, while permitting water to drain through the area.

Wednesday, February 06, 2013 1:39 PM

Hi Brian,

I am using your "How to Fix a Giant Sinkhole" article for a math lesson on volume of a cylinder. I have one question for you. You mentioned.

"It's not clear whether cement is the best option, however. A 6,500-cubic-foot wad of concrete may serve to concentrate water runoff in other areas, leading to more sinkholes."

Can you please tell me where you got 6500 cubic feet from? Did you do 65×100 ? We get something closer to 342,000 cubic feet.

Thanks,
Robert

Apparently you picked the wrong article for a math lesson! I apologize. It appears you are correct. I can't find anything in my notes to save myself-- I think I just screwed up. Dunce cap for me.

Sinkhole Dimensions

- National Geographic: "60 feet (18 meters) wide and about 30 stories deep"
- Time Magazine: "runs some 200 ft. deep"
- CNN: "The 20-meter (about 66 feet) diameter sinkhole is about 30 meters (about 100 feet) deep."
- Slate: "A sinkhole, 65 feet across and 100 feet deep"

Complicated or Complex?

Cookie Monster Cupcakes

Nailed it

method

1. Using an electric mixer, whip the butter until it is pale. This will take at least 5 minutes on high.
2. Gradually add in the icing mixture and vanilla until well combined.
3. With the mixer running, add in food colouring until you get to the Cookie Monster colour. This may be a lot if you are using liquid food colouring or a little if using gel food colouring.
4. Add in the milk and mix until the frosting puffs up.
5. Fill a piping bag with a fluted nozzle and pipe on icing.
6. With the writing icing, place black spots on the marshmallows for pupils.
7. Place on each cupcake.
8. Cut cookies in half and place in 'mouth'.

CUBES

A problem solving strategy

C - Circle the #s

U - underline the ques.

B - box the words

Content Objective Example

- **SWBAT** apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. (MP4)

Language Objective Example

- **SWBAT** explain correspondences between equations, verbal descriptions, tables, and graphs. (MP1)

- In early grades, this might be as simple as writing an addition equation to describe a situation. (MP4)
- In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. (MP4)
- By high school, a student might use geometry to solve a design problem or use a function to describe how one

WHAT'S IT LOOK LIKE....

- when students have procedural skill but not conceptual understanding or the ability to apply mathematics?
- when students can work with numbers but cannot:
 - critically think
 - applying knowledge and skills to real-world settings
 - analyze and solve complex problems

How far apart are the exits on this freeway: Jct 90 and Jefferson Blvd?

DEFINING THE PROBLEM

- Students appear to demonstrate “deep, authentic command of mathematical concepts” when given commonly used problems.
- However with more challenging problems, the same students seem to no longer demonstrate that command.

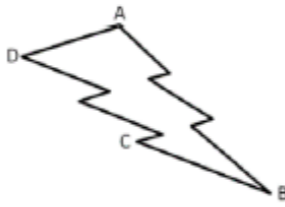

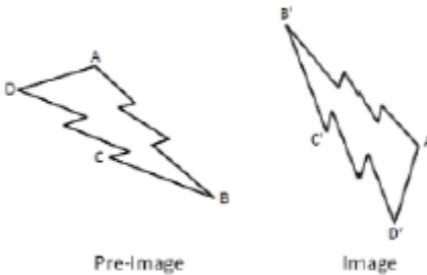

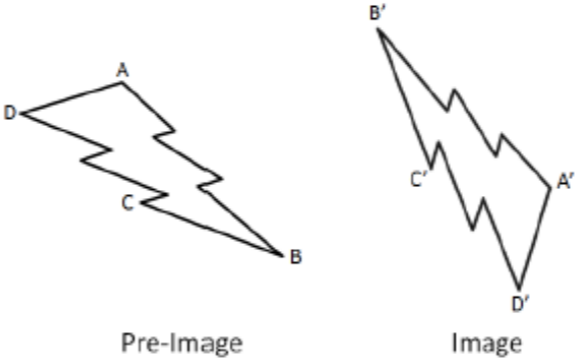

ADDRESSING THE PROBLEM

- First, we must have a clear understanding about why these problems are different from one another.
- Next, we need to practice using these problems so that we understand how students may react to them.
- Last, we need a source that can provide us with a variety of free problems.

DOK LEVEL DIFFERENCES

Level 1: Recall & Reproduction

- Often a trivial application of facts.
- Generally requires little effort beyond remembering a formula.
- Usually only one answer.

Level 2: Skills & Concepts

- Usually requires more than one step to solve.
- Often multiple answers.

Level 3: Strategic Thinking

- Usually requires critical thinking about how to approach a problem.
- May be multiple answers or a single optimal answer.
- Often challenging enough to make your head hurt.

Level 4: Extended Thinking

- These are generally represented by performance tasks or problem-based lessons.

ADDING DECIMALS

Use the digits 1 through 9, exactly one time each, to fill in the boxes and make three decimals whose sum is as close to 1 as possible.

$$\begin{array}{r} 0.\square\square\square \\ 0.\square\square\square \\ + 0.\square\square\square \\ \hline \end{array}$$

First attempt:

Points: ___/2 attempt ___/2 explanation

area:
48

What did you learn from this attempt? How will your strategy change on your next attempt?

~~This attempt doesn't equal 24.~~

Second attempt:

Points: ___/2 attempt ___/2 explanation

area:
32

What did you learn from this attempt? How will your strategy change on your next attempt?

The perimeter was 24, and the area was 32
but I think there's a blader #

Fourth attempt:

Points: ___/2 attempt ___/2 explanation

What did you learn from this attempt? How will your strategy change on your next attempt?

The perimeter is 24, but the area is 11 and attempt #2 the area is 32
Strategy: Use #'s with more than one row.

Fifth attempt:

Points: ___/2 attempt ___/2 explanation

area:
35

What did you learn from this attempt? How will your strategy change on your next attempt?

DOK FAQ

- When will students ever use this?
- What DOK level should I start students with?
- How do teachers fit these problems in?
- How do I help prevent students from giving up after trying the problem once or twice?
- Where can I find other DOK 2 and DOK 3 problems or submit ones I've made?

EQUIDISTANT POINTS

Directions: How many points with integer coordinates are 5 units away from $(-2, 3)$?

Hint

Which methods are available to determine the answer to this problem? What shape is defined by *all* of the points that are 5 units away $(-2, 3)$?

Answer

12 points: $(-5, 7)$, $(-7, 3)$, $(-5, -1)$, $(-2, -2)$, $(3, 3)$, $(1, -1)$, $(-2, 8)$, $(1, 7)$, $(2, 6)$, $(-6, -6)$, $(-6, 0)$, and $(2, 0)$

How I Can Help You

Real World Problems

My workshops help teachers implement problem-based lessons by helping them experience them from both student and teacher perspective, leading to increase students' success with performance tasks and the Common Core State Standards.

Depth of Knowledge

Problems at higher depth of knowledge levels have the potential to challenge your most talented student yet remain accessible to everyone. I can help teachers develop best practices for implementing them so that students persevere longer towards finding the solution.

PERFORMANCE

TASK

CEREAL BOXES

A cereal company uses cereal boxes that are rectangular prisms. The boxes have the dimensions shown.

- 12 inches high
- 8 inches wide
- 2 inches deep

The managers of the company want a new size for their cereal boxes. The new boxes have to be rectangular prisms. You will evaluate one box design the company proposed. Then you will create and propose your own design for the company.

Requirements for the new boxes:

- The new boxes have to use less cardboard than the

1

Determine the volume of the current cereal box with the dimensions 12 inches high, 8 inches wide, and 2 inches deep.

Find the volume, V , in cubic inches, of each box.

Volume of Original Box: $V = \underline{\hspace{1cm}} \text{ in}^3$

Depth of Knowledge Matrix - Elementary & Secondary Math

| Topic | Surface Area and Volume | Probability | Transformations | Factoring Quadratics | Quadratics in Vertex Form |
|------------------|---|--|--|---|--|
| CCSS Standard(s) | <ul style="list-style-type: none"> 6.G.4 7.G.6 | <ul style="list-style-type: none"> 7.SP.5 7.SP.7 | <ul style="list-style-type: none"> 8.G.1 G-CO.5 | <ul style="list-style-type: none"> A-SSE.3a | <ul style="list-style-type: none"> F-IF.7a |
| DOK 1 Example | Find the surface area of a rectangular prism that measures 3 units by 4 units by 5 units. | What is the probability of rolling a sum of 5 using two 6-sided dice? | Rotate the image below 90° counterclockwise about point D and reflect it across a horizontal line.  | Find the factors: $2x^2 + 7x + 3$ | Find the roots and maximum of the quadratic equation below. $y = -3(x - 4)^2 - 3$ |
| DOK 2 Example | List the measurements of three different rectangular prisms that each have a surface area of 20 square units. | What value(s) have a 1/12 probability of being rolled as the sum of two 6-sided dice? | List three sequences of transformations that take pre-image ABCD to image A'B'C'D'.  | Find three different integers to put in the blank that will make the quadratic expression factorable. $x^2 + __x + 4$ | Create three equations for quadratics in vertex form that have roots at 3 and 5 but have different maximum and/or minimum values. |
| DOK 3 Example | What is the greatest volume you can make with a rectangular prism that has a surface area of 20 square units? | Fill in the blanks to complete this sentence using the whole numbers 1 through 9, no more than one time each. Rolling a sum of $__$ on two $__$ -sided dice is the same probability as rolling a sum of $__$ on two $__$ -sided dice. | What is the fewest number of transformations needed to take pre-image ABCD to image A'B'C'D'?  | Fill the blank by finding the largest and smallest integers that will make the quadratic expression factorable. $2x^2 + 3x + __$ | Create a quadratic equation with the largest maximum value using the whole numbers 1 through 9, no more than one time each. $y = -\square(x - \square)^2 + \square$ |

FIVE

PRACTICES

DISCUSSION QUESTIONS

- “Giving students too much or too little support, or too much direction, can result in a decline in the cognitive demands of the task.” (p. 550) Why?
- “By making purposeful choices about the order in which students’ work is shared, teachers can maximize the chances that their mathematical goals for the discussion will be achieved.” (p. 554) What ways do teachers currently select students? How would you suggest they change their selection process after reading this?
- What challenges might teachers have when trying to “connect” student solutions? (p. 554)

IMPLEMENT 5 PRACTICES

1. Pick a mathematical goal that you anticipate using before looking at the student work.
2. Next, review the student work to simulate the reality that you won't know what students will actually do.
3. Figure out which students you would have share their mathematical work.
4. Determine the order you would have those students present their work.
5. Decide on which connections you would emphasize between the students' work and mathematical ideas.

POSTERS

- At the top of the poster, list the mathematical goal picked by your group. For example:
 - Starting with the most commonly used strategy and moving to one that few students used.
 - Starting with a strategy that is more concrete and moving to strategies that are more abstract.
 - Incorporating wrong answers to address common misconceptions (“Who made the best mistake?”)
- Attach those students’ work to the poster in the order that you would present it.
- Next to the student work list the questions you would ask the student(s) or ideas that you would want to come out as a result of showing that student’s work.

- 
- **Change**
 - **Transition**
 - **Ending**

- **Change**
- **Transition**
 - **Ending**
 - **Neutral Zone**

- 
- **Change**
 - **Transition**
 - **Ending**
 - **Neutral Zone**
 - **New Beginning**

What does this
mean for math
education?

- 
- **Change**
 - **Transition**
 - **Ending**

- 
- People may not stop doing anything. They may try to do all the old things and the new things. Soon they burn out with the overload.
 - People make their own decisions about what to discard and what to keep, and the result is inconsistency and chaos.
 - People toss out everything that was done in the past.

- **Change**
- **Transition**
 - **Ending**
 - **Neutral Zone**

- 
- **Change**
 - **Transition**
 - **Ending**
 - **Neutral Zone**
 - **New Beginning**

GOALS

ENGAGING PROBLEM SOLVING

REAL WORLD PROBLEM-BASED LEARNING

HIGHER DEPTH OF KNOWLEDGE PROBLEMS

BETTER IMPLEMENTATION

IMPROVE QUESTION ASKING

PRACTICE PREPARING FOR A LESSON

DEAL WITH UNCOMFORTABLE SITUATIONS

PRE-MORTEM

- The lesson flopped. What went wrong?
- You have sixty seconds to write down all the reasons the lesson did not go well.
- Create a combined list with your neighbors.
- Then discuss “less helpful” and “more helpful” ways you could address them if they do happen.

SETTING UP THE PROBLEM

- What do you do when students ask for data/information you don't have, hadn't considered, or forgot to get?
- What do you do when students ask for information that is probably not important or that they don't actually need?

IA conclusion each
for different items

CONCLUSION Each Item is good

in store purchase, exclusions

What is your conclusion? How did you reach that conclusion?

If the item is \$15 use the \$5 off because

$$15 - 5 = 10 \text{ and } 15 - 20\% = 12$$

If the item is \$47 it is better to use the 20% off coupon because

$$47 - 5 = 42 \quad 47 - 20\% = 37.60$$

\$5 off 20% off
42 vs 37.60

$$\begin{array}{ll} \$5 \text{ off} & 20\% \text{ off} \\ 18 \text{ vs } & 18.40 \end{array}$$

$$23 - 5 = 18$$

$$23 - 20\% = 18.40$$
